Delia Agricultural Fair

Favored with ideal weather, and perhaps a larger attendance of people than in any previous year, the Delia Annual Agricultural Exhibition held on Wednesday was a decided success in every way. This year it was the aim of the Board of Directors to create a greater interest in the Fair, so they departed somewhat from the regular rules of the association, and in addition to the showing of live stock, grains, grasses, etc., there were sports, races, a big baseball game in the afternoon, and other attractions.

The aeroplane, which was advertised to be in attendance at the grounds during the day, for some reason failed to put in an appearance. Many who had previously obtained tickets for the novelty of soaring into space for a brief period, therefore were disappointed.

The lady directors ran a refreshment booth on the grounds, and catered to everyone in the way of ice cream, soft drinks, tea, coffee, sandwiches, pie, etc., and all worked indefatigably to make the day a success.

There was a baseball game later in the evening between Delia and Sentinel Hill, the latter being in the lead until rain stopped the game.

The day's proceedings finished up with a mammoth dance in the Olympia Theatre at night, the hall being crowded, many coming especially from Mecheche and other points. The Victor Orchestra supplied the music.

This year's fair is admittedly the best held for many years, both in point of attendance and entries, in many classes doubling those of last year. The only thing that marred the pleasures of the day was a heavy local shower during the baseball game later in the evening.

In the judging of livestock, for pure bred stallions, Jim Savage, Mecheche, was obtained first, Hosane Martin, second, and Pete Boland third.

In the Clydesdale class, for the best pure bred colt, Alex. Stronech won first and second, while for the best mare he also took first and second, and also the sweepstake.

In class 3, sec. 2, for the best calf, beef type, George Gillrie won first.

In beef grade calves, R. E Gillrie won first and second, and W. J. Bryan third.

In yearlings, beef grades, W. J. Bryan attained first and second, and Dave Elliot third.

For the best two-year old Holstein Heifer, Geo. Lowe was first. Norman Burke second and Wilfred Skippen third.

In grade dairy cows Bob Duncan won first, Pete Thompson second and third.

A detailed list of the prize-winners will be published in following issues of The Times.

Price war: Accumulating a defient for the winner to collect from the public after it's over.

If he's to shrewd to swallow flattery, and hasn't a dog, you might brag on his brand of cigarettes.

Of course women are awful drivers. But once in a while you read about a train or a ship wreck. And women don't drive those.

Business Summary

[Issued by the Bank of Montreal].

Nothing has occurred during the last four weeks to mar the prospect of a bountiful harvest nor to diminish the volume of current business. It may be said, indeed, that conditions commercially have never been better in Canada, nor prospectively have held out greater assurance of reasonable continuance. To the above statement the harvests of three successive seasons have been an important contributing factor, and prevailing confidence in business circles is founded upon belief that this year's crop yield will at least compare favorably with that of 1927 and may even exceed it given propitious weather during the next six weeks. A larger area has been sown to grain in the Prairie Provinces, the lowest estimate of increase being a million acres. There has been adequate moisture with conditions local, and save an odd exception here and there over the vast territory conditions leave little to be desired.

In the several branches of production and manufacture a substantial degree activity continues. Mineral output in Canada continues to expand, and the most remote future in respect of gold, copper and lead. Iron and steel manufacturers are employed to the limit and shoe industry maintains recent improvement. Textile mills hold up under the strain of foreign competition although operating under capacity; distributing trades find business better than of late years; and retail business maintains the volume to which such a large influx of tourists contributes. Indeed, the latter has become an important factor in summer trade, estimated as being made that not less than $250,000,000 will be spent in Canada by American tourists to offset the adverse balance of trade with the United States. The automobile industry experiences seasonal slowness, but statistics show a production of 26,784 passenger cars in May, a number in excess of any previous recorded month, while the production of trucks was in the same month 4,179, has only twice been exceeded. The output of Agricultural implements continues on a large scale.

Car loadings reflect commodity movements as commodity movements reflect distribution and consumption. There were 1,000,000 more cars loaded this year to July 7th than to the corresponding period in 1927 and 161,000 more than five years ago; and it is significant of the healthy state of business that merchandise and miscellaneous freight were the largest gainers this year.

The newsprint industry has not attended its activity, production of Canadian mills having risen 102,561 tons in June and in the first half of the year 195,505 tons more than in the same period in 1927. These mills, however, operated last month at only 70.2 per cent. of capacity, and largely as a consequence of capacity outstripping consumption prices have become less stable. The situation is a subject of much general discussion.

The foreign trade of Canada in June followed the trend of recent months, a small increase in imports. Exports of domestic produce last month amounted to $107,121,000, as against $105,070,000 in June of last year; imports had a value of $110,665,000 as against $101,018,000 the year before. On the export side there was an increment of $5,740,000 in

(Continued on back page)

Minutes of M.D. Council of Lambton

The council met at Delia on Saturday, August 4th, at 2 p.m. All councillors were present.

Minutes of previous meeting were read, and on motion of coun. Hawkins were adopted.

The matter of the Hanna Hospital vote on the extension to the Hospital at Hanna was discussed, and it was agreed by the council that additional accommodation in the district was urgently needed.

It was moved by coun. Chapman, and carried unanimously, that we write to the Hanna Hospital Board proposing that they take another vote on the extension at Hanna, and at the same time vote on the erection of a sub-hospital at Craigmyle. That the ballot be made out so that there will be one answer to the two questions, making it necessary for the voter, if he is in favor of additional accomodation, to vote both for the addition to the hospital at Hanna and also for the sub-hospital at Craigmyle. That Messrs. Nelson and Rose be a committee from the council to co-operate with the committee at Craigmyle in trying to work out a solution to this question in conjunction with the Hospital Board.

Coun. Hawkins reported that the commissioners appointed at the last meeting to look over the diversions asked by Mrs. Dodge and William Reeves, had done their work, and that they had decided a diversion should be made on the East side of the slough west of sec. 7-31-17-4 and one on the West side of the slough west of 13 & 24 31 17 4. It was decided to have these diversions surveyed, and a by-law prepared expropriating same.

It was moved by coun. McDonald that the Village of Delia be asked to pay one-half the cost of the land purchased from the Alberta Pacific Grain Company from their agent, Harold Gee, for a right-of-way at Delia for road purposes. Car.

The Secretary was instructed to write Richardson Road Machinery Company, and endeavor to make a deal with them for larger rear blades for the steam grader we purchased from them.

By-law No. 60 road expropriations, was read and it was moved by coun. Simpson that this by-law be received and readings at this meeting. Carried unanimously.

By-law No. 60 having received its three readings, it was moved by coun. Simpson that this by-law be adopted as read. Carried.

It was moved by coun. Simpson that Dr. Kydd's resignation be accepted, and that Dr. Vasnickle be appointed Medical Health Officer for the whole Municipality at an annual salary of $200.00. Car.

A letter was read from J. G. Vasnickle claiming payment of $7.50 for certain services rendered. It was explained that these were services Vasnickle claimed this money for were part of the work for which Dr. Kydd was to be paid, and he moved that payment of this claim be refused. Carried

Mr. Bone was present and gave a report on the weed situation. He said the Sow Thistle was quickly becoming a menace to the county, and was becoming quite a menace. He also reported on the experiments he had been carrying on with the Atlas weed killer. He said it was working a lot of trouble with the Soldier Settlement Board lands, as it seemed necessary for everybody to get the Board to co-operate with him.

It was decided to call off the Sep tember meeting.

Moved by coun. Chapman that we write the Department of Public Health advising them of our appreciation of the good work being done by the Travelling Clinics, and asking that more clinics be sent out so that they can go over the Province more thoroughly and visit most of the country schools. Carried

Moved by coun. Nelson that in future we order just one make of each line of road machinery in order that repairs may more readily be obtained for same. Carried

Secretary read a list of those in arrears for taxes, and the matter of making some returns was discussed. Meeting adjourned.

Alberta Wheat Pool

Another $34,000,000 for Western Farmers from last year's crop sales

Winnipeg July 28th:—An interim payment of more than $34,000,000 is being made today to members of the Canadian Wheat Pool in western provinces. In practically every district of Saskatchewan, Manitoba, and Alberta post members will share in the distribution, which is the largest interim payment ever made by the Wheat Pool.

Today's payment is the second interim one for the 1927-28 crop, the first having been made on March 10th.

"There seems to be general satisfaction among our members as to the manner in which the various selling policies were handled, and that the averaged price obtained for their wheat," stated E. B. Ramsay, manager of the central selling agency, Winnipeg, in announcing the payment.

On contract grades the payment to Provincial Pools ranges from 16c to 25c per bushel; tough grades from 10½c to 20½c; Nos. 4 to 6, 1c to 12½c, and on durums, 11½c to 19½c per bushel, according to grade.

The following statement was made today by the Alberta Pool:—

As announced by our Central Selling Agency, Winnipeg a second interim payment on deliveries to 1927-1928 Pool is being distributed under date of July 28th to our Alberta Wheat Pool members. Cheques totalling approximately seven million dollars are being mailed Saturday, July 28th, and will include a payment on deliveries made to the Pool by elevator companies to June 30th, and upon coupons reaching the Pool office to July 16th. A second issue of cheques covering later deliveries, as well as current coupons, will go forward during the next two weeks.

Spreads estimated at the commencement of the season have been adjusted by our Central Selling Agency in this present interim payment, according to the selling spreads of each grade of wheat, with the result that values varies considerably on different grades. The previous years' loan spreads have been adjusted in our final payment.

From this second interim payment made by our Central Selling Agency, 2c per bushel has been withheld from each grade by the Alberta Pool, of which 1c is for loss and damage fund for Reserves, and further 1c to cover Commercial Reserve and operating expenses. Another 2c is retained for Commercial Reserve and operating costs and is estimated at this time, and it is anticipated amount retained for these purposes will be in excess of these requirements, and any such surplus will be distributed among shippers with our any final payment which may be available following our season, following close of 1927-1928 Pool.

Payments to Alberta Pool members delivering to 1927-1928 Pool, under present interim payment, as well as estimated deductions for Reserves and Commercial Reserve deductions and operating costs, total to date on several of the more important grades, basis in Fort Vancouver, as follows:—

No. 1 northern, 31-4; 2, 31.33½; 3, 31.23; 4, 31.15½; 5, 90c; 6, 90c; feed, 76c.

Tough—3 northern, 31.36½; 2, 31.27; 3, 31.17½; 4, 31.09½; 5, 90c; 6, 90c; feed, 76c.

The next payment now being distributed to Alberta Pool members on a few much more important grades is as follows:—

No. 1 northern, 31c; 2, 17.56½; 3, 12c; 4, 11.50; 5, 90c; 6, 90c; feed, 76c.

Tough—1 northern, 25.56½; 2, 19c; 3, 18.50; 4, 18c; 5, 90c; 6, 90c; feed, 76c.

Pool members are requested to send in to the Pool Office, Calgary, any delivery checking coupons still being held.

Olds School of Agriculture

August 16th has been set as the day for the annual U.F.A. picnic and field day at the Olds School of Agriculture. The programme for the day will consist of reviewing the crops, stock, flowers, fruits and vegetables, as well as some recreation pass-time. The day is open to visitors from all walks of life, and from all parts of the province. The Olds School of Agriculture management would appreciate having as many people as possible visit the institution on that date. They make provision for supplying coffee and milk, free of charge to the visitors, and also supply cups and plates, the visitors bringing their own lunches.

The crops and the grounds are looking very well, and it would be worth the time of Alberta residents to plan a day at the School of Agriculture on this date.

Lord Rodney Signs Wheat Pool Contract.

Following the example of H.R.H. the Prince of Wales, whose wheat crop from his ranch west of High River is marketed through the Alberta Wheat Pool, Lord Rodney who farms a large acreage near Fort Saskatchewan, has recently signed one of the new pool contracts. Another British peer who is a member of the Alberta Wheat Pool, is the Duke of Sutherland, whose seven-thousand-acre farm at Brooks has been under contract for a number of years.

NOXIOUS WEEDS

To Editor of "The Delia Times"

Sir,—Kindly allow me a little space in your paper to call the attention of your readers to the alarming rapidity with which Perennial Sow Thistle is increasing is this municipal district.

Within the last few weeks I have found dozens of patches on various farms, these farms, in some cases, being practically free of other noxious weeds. The discovery of the sow thistle causing great concern among the owners.

I am sure it would be advisable for every farmer to acquaint himself with the appearance of this weed as, in some of the cases mentioned, this weed is to an advanced state of growth—the seeds being just ready to blow.

This being a perennial plant, it often needs detection, many people being ignorant of its presence until the flowers appear.

The Perennial Sow Thistle is not hard to identify. Its stems vary in length from one to five feet and are hollow, the leaves from six to twelve inches long pointed and deeply cut, clasping the stem with their heart-shaped base, and are borne with spines; flowers a bright yellow, about one and one-half inches across. The root stocks are creeping, and run mostly below the ground, and large numbers of new plants shoot up from the creeping root, and the whole plant contains a milky juice.

This is considered the worst of all the noxious weeds, it being almost impossible to eradicate once it gets a good start, and has driven many farmers off the land in parts of Manitoba and Saskatchewan.

Farmers of this municipality will, I am sure, realize the serious consequences of the presence of this weed in their district, and will do all in their power, by co-operating with their weed inspector, to prevent its spread.

Anyone doubtful of the identification of this weed, and suspecting its presence, will do well to get in touch with me by calling phone No. 16 914, or calling the office of Mr. C. H. Rose, Craigmyle.

Thanking you, Mr. Editor, for your courtesy. Faithfully yours,

J. R. BOON, Weed Inspector
M.D. Lambton, 308.

A Great Achievement

Keen interest has been aroused in all parts of Canada by the announcement made at Victoria, recently, by Sir Henry Thornton, President of the Canadian National Railways, that, as a result of some years of study and work, a plan will be submitted to the Government and Parliament in the very near future providing for the financial reconstruction of the national system of railways, a plan which, in the words of the C.N.R. president, "will fit perfectly, relieve the C.N.R. from being any further drag upon the treasury of Canada."

As a matter of fact, the financial reconstruction of the Canadian National Railways has been proceeding apace for some years past through the making of amicable arrangements with stockholders and bondholders of several of the railways now incorporated in the national system. These arrangements were a necessary preliminary step to a final consideration and development of a plan whereby the system could be relieved of the huge burden imposed upon it by reason of its heavy over-capitalization.

In considering the Canadian National Railways, it is always to be remembered that it was not constructed, like the Canadian Pacific, as one operating unit. On the contrary, it is the result of the amalgamation of several different systems, with lines often duplicating each other in the same territory, which were operated as separate and distinct railways with each other equipment. Thousands of miles of the system were built, not for purely commercial reasons, but as a feature of national policy for the opening up, colonization, and national development of the Dominion. Some portions were located for strategic rather than from the standpoint of the business to be secured or developed.

Under the circumstances, it was not surprising, but rather to be expected, that such things would be operated at a deficit for many year the these deficits have been charged up against the lines which ultimately became part and parcel of the present Canadian National Railways. These individual systems were, in reality, bankrupt when the Government was compelled to take over the roads in order to prevent a general financial disaster which would have shaken the Dominion and all but ruined its credit in the money markets of the world. Had these railways remained in private ownership and gained into receivership, there would have been a general writing down of capitalization and holders of the stocks and bonds would have had to take their losses, while the Dominion itself would have lost all the many millions it has paid to the roads.

It has long been foreseen that, if the Canadian National Railways were ever to earn sufficient revenues to meet interest charges on its capitalization, the financial structure of the system would have to be reconstructed so as to more nearly bear some relation to the actual physical value of the system as a going concern. But, as already stated, certain arrangements with the stock and bond ho'ders of the old railways had to be negotiated if Canada was to escape the stigma of having broken faith with the investors and the accusation of being guilty of a policy amounting almost to repudiation.

Neither Sir Henry Thornton, nor Hon. C. A. Dunning, Minister of Railways, has any desire to alter the nature of the guarantee given to Parliament, but the people of Canada, as reflected by the editorial expressions of papers on all sides of politics, are decidedly friendly to the development of any reasonable plan which will give the management of the national railways a fair chance to make the system self-supporting and ultimately a profit making enterprise.

When Sir Henry Thornton, at the request of the Mackenzie King Government, accepted the presidency and management of the Canadian National Railways, it was still in a state of disorganization. From an operating standpoint it had to be completely reorganized. At that time it was not only carning one cent of interest on its outstanding stocks and bonds but it was being operated at an actual loss year after year, which loss had to be put up in cold cash out of the Dominion treasury. Next to the war debt of Canada, it was the greatest problem imposed on the Canadian people. The outlook was blue indeed, and many people feared it would bankrupt the Dominion.

Therefore, before any permanent reconstruction of its financial system could be undertaken, it was not only necessary to effect the arrangements already referred to, but even more necessary that these annual losses be operation be stopped. It stands to the credit of Sir Henry Thornton that in this he was splendidly successful. Operating results showed gratifying gains year after year in the net earnings, which have now reached the point where the annual deficit of Canada, in so far as the Canadian National Railways is concerned, has been practically eliminated. The outlook was blue indeed, and many people feared it would bankrupt the Dominion.

Therefore, before any permanent reconstruction of its financial system could be undertaken, it was not only necessary to effect the arrangements already referred to, but even more necessary that these annual losses be operation be stopped. It stands to the credit of Sir Henry Thornton that in this he was splendidly successful. Operating results showed gratifying gains year after year in the net earnings, which have now reached the point where the annual deficit of Canada, in so far as the Canadian National Railways is concerned, has been practically eliminated.

Addressing a meeting in a Saskatchewan town last month, Sir Henry Thornton stated that the surplus this year would be the largest in the history of the system and that the outlook for the future was as real and as very valuable asset of the Dominion was never brighter, and this despite increased wages to employees and lower freight rates imposed by the Railway Commission.

The final and definite financial reconstruction of the whole system, and the resultant establishment of the Canadian National Railways as a self-supporting, publicly-owned transportation system, will be a matter of the greatest satisfaction to the taxpayers of Canada, but it will prove a guarantee to the whole world of the financial stability and strength of the Dominion, and be hailed as another great Canadian achievement.

To Represent Canada

Canadians To Attend International Fuel Conference In London

Edgar Stansfield, research engineer, scientific and industrial research council of Alberta and R. J. Hutchinson, chief engineer, division of fuels and fuel testing, department of mines, Ottawa, will represent Canada at the international fuel conference to be held in London, England, Sept. 24 to Oct 6. The conference is to be held under the auspices of the world power conference at the Imperial Institute. Some 22 countries will be represented.

Invents New Helicopter

The central office for the investigation of new aviation inventions announces that a German has invented a new form of helicopter plane. The model, which was tried out in Berlin, has a horizontal rotating propeller which makes vertical ascents and descents possible and holds the machine suspended in air. A full size helicopter is under construction.

First Woman Air Pilot

Lady Heath Employed By Royal Dutch Air Lines

Lady Heath, noted British air woman, has been engaged by the Royal Dutch Air Lines as a pilot for the passenger air service. She is the first woman to be so employed.

Lady Heath, the former Mrs. Hilton Lyon, is the wife of Sir James Heath, ironmaster and colleries proprietor. She arrived at Croydon on May 17, from Cape Town by South Africa. Completing a 10,000 mile solo flight started in February, she was the first woman to fly the length of the African continent.

Peers Patronize Pool

Following the example of His Royal Highness the Duke of Bedford, Lord Harby, eighth Baron of Rodney, who operates a thousand acre farm east of Edmonton, has signed up with the Wheat Pool contract. A third British peer who is a member of the Wheat Pool is the Duke of Sutherland. The 7,000 acre Sutherland farm at Brooks has been under a pool contract for a number of years. This farm is one of the show places in the Brooks district.

A great deal of time is wasted by urging the other fellow to have common sense. If he hasn't common sense, he won't get it, so let him alone.

Many a man's so-called happy home is happy only when he isn't there.

League Is Fighting Illicit Drug Traffic

New International Convention Goes Into Effect In September

A general world-wide tightening-up of the illicit "dope" traffic is scheduled to take place when the League's new international opium and harmful drugs convention goes into effect on Sept. 25th.

Although the convention was launched in 1925, provisions were made that it could only become effective when ratified by at least 10 states of which seven must be members of the League council including two permanent members.

To date the convention has been ratified or adhered to by nearly 30 states but it was only Canada's recent ratification that gave the necessary number of council members.

THE UNTOUCHED MEAL

People Who Go Hungry With Food On the Table

"I simply don't eat." Actual tragedy is suggested by these simple words, so often heard, because they are usually the beginning of trouble that sooner or later reveals itself as indigestion, sour stomach, dyspepsia, with violent headaches and other serious symptoms. Loss of appetite, whether a man or woman, is a symptom you dare not ignore; for it means that suffering is sure to follow.

The secret of a good appetite—the secret of keeping well—is to keep up the richness of the blood. Get the riching and purifying the blood Dr. Williams' Pink Pills supply strength to the wearied organs of digestion, and enable them to digest, thoroughly the food the stomach needs without pain or distress. Proof of this is given by Mrs. Wm. H. Kelly, Kingston, Ont., who says:—"I cannot express how wonderful Dr. Williams' Pink Pills too highly. I had been bothered with indigestion in a chronic form for almost thirty years. Everything I would eat would turn sour. I felt as though there was a big ball in my stomach all the time. I felt tired all the time, and often quite dizzy. I doctored and tried many medicines, spending many, many dollars, but to no avail. One day I heard a lady praising Dr. Williams' Pink Pills and I decided to try them. I am more than glad I did for soon after beginning to take the Pink Pills for a couple of months the trouble had disappeared, and now I can eat all kinds of food, and have again my old time health and strength."

Send For These Health Books.

Two useful books, "Building Up the Blood," and "Where To Eat and How To Eat," will be sent free by the Dr. Williams' Medicine Co., Brockville, Ont., if you mention this paper.

Dr. Williams' Pink Pills are sold by all dealers in medicine or will be sent by mail, post paid, on receipt of price, 50 cents per box.

Frown On Assisted Immigration

Native Sons Of Canada Would Limit Immigrants To Canadian Born

The Native Sons of Canada in convention at Regina, passed a resolution favoring the elimination of financial assistance to any immigrants other than Canadian-born who had left Canada to settle elsewhere. The resolution went further and brought into Canada should be assisted financially according to the "resolution. If necessary, in addition to advocating the elimination of financial assistance, the Native Sons, while recognizing the importance to Canada of immigration, would not encourage any other than those who would enter the farming industry. Another resolution urged the Native Sons on record as being opposed to "patriotic films" that were made outside of the British Empire.

Heiress To Hundred Million

Gladys Yule, 24, the shy and little known daughter of the late David Yule, a merchant of Calcutta, is expected to become the richest heiress in the United Kingdom through the death of her father recently. His estate is estimated at $100,000,000.

For Scalds Or Burns.—Dr. Thomas' Eclectric Oil is a standard remedy for the prompt treatment of scalds and burns. Its healing power quickly soothes the pain and leads to speedy recovery from the injury. It is also an excellent remedy for all manner of cuts, bruises and sprains, as well as for relieving the pains arising from rheumatism. A generous trial, or bottle in the house and stable saves a doctor's and veterinarian's fee.

A bald-headed man who has heard that the hairs of our heads are numbered wants to know if there is not some place where he can get the back number.

SUMMER COMPLAINT Nearly Lost Her Little Girl

Mrs. Theodore Rivett, Antiany, Ont., writes:—"Our Pat is nearly four years old, his little girl as she was suffering terribly from summer complaint. She became very thin and weak; had no appetite and could hardly walk across the room without falling down. At last my mother advised me to get a bottle of

and after she had taken a few doses she was relieved.

I also found it a grand remedy for cramps, and would not be without a bottle of it in the house for anything."

She been on the market for over 50 years; put up only by The T. Milburn Co., Limited, Toronto, Ont.

Recipes For This Week

(By Betty Barclay)

SCALLOPED EGGS AND CHEESE.

4 eggs.
½ cup grated cheese.
½ cup soft bread crumbs.
¼ teaspoon salt.
1 cup white sauce.
Few grains cayenne.

Break the eggs into a buttered baking dish and cook in hot oven until they begin to turn white around the edge. Then cover eggs with white sauce, and over this the mixture of crumbs, cheese and seasonings. Brown in very hot oven, so eggs will not be overcooked by time cheese is brown.

ROLY-POLY

2 cups flour.
4 teaspoons baking-powder.
4 teaspoons sugar.
4 tablespoons butter.
¾ cup milk, scant.
1 egg, beaten.
4 oranges.
Grated rind 1 orange.
½ cup sugar.

Mix and sift flour, baking-powder, and salt. With tips of fingers rub in two tablespoons butter, and mix to a soft dough with the egg and milk. Roll out about inch thick, and cover with small pieces of orange pulp. Mix sugar, orange rind, and remaining butter, and sprinkle two-thirds of it over the orange. Roll up, pinch ends together, and place in baking-dish, sprinkle with remaining sugar; surround with water, and bake about thirty minutes. Serve with an orange or lemon sauce.

Miller's Worm Powders are a prompt relief from the attacks of worms. Children suffering from worms pull in their action and, while leaving the system, they destroy the worm expellant have an invigorating effect upon the youthful system, preventing fever, biliousness, loss of appetite, sleeplessness, and other ailments that follow disorders caused by worms in the stomach and bowels.

Small Thing To Look For

But Twenty-Fifth Billionth Of Inch Means Much To Astronomers

Measurements equivalent to the one-25,000,000,000th of an inch have been made by Albert A. Michelson, at Mount Wilson Observatory, in researches to prove the contention of Einstein that light is not "lost" when light is "bent" when it passes a gravitational field, such as the sun. Professor Frost of the Yerke Observatory explains that the accuracy of the placement sought and found by Mr. St. John is very minute, being a little less than one-billionth of one twenty-fifth of an inch. It was a small thing to look for but a big thing to find, because it permits another proof of the Einstein theory in regard to light rays.

Only the uninformed endure the agony of corns. The knowing ones apply Holloway's Corn Remover and get relief.

Canada's Trade Increasing

Bids Fair To Beat All Records Of United States

Canada is becoming rapidly as prosperous as the United States. Her per capita international trade is the second biggest in the world, being exceeded only by that of New Zealand. She is becoming more and more industrialized. During the present year the value of her exports has been multiplied five times, and her transPacific trade twenty times. She bids fair to beat all records of the United States. It is a pity that British trade with the Dominion is not greater.

"I say, what shall I do if they ask me to sing?"

"Do? Why sing of course. It'll be their own fault."

The wood of the balsam fir is very light in color, and, being odorless, is very suitable for boxes intended for packing food materials.

No electrical device has yet been invented that can take the place of "wire pullers" in an election campaign.

One little trouble may make us forget a dozen things we ought to be thankful for.

The average man is better at considering the misdeeds of other people than he is at acknowledging his own.

Minard's Liniment for Blistered Feet.

Look For Lost Heir

Strange Case Is Reported That Resembles Dickens's Story

A story strongly reminiscent of Miss Havisham, of Satis House, in Dickens' "Great Expectations" is connected with a small villa at Bush Hill Park, on the north side of London, England. For two years the house has been left for to decay; the furniture is rotting and the once charming garden is overgrown.

Exactly two years ago, Miss McCloy—like Miss Havesham—received on the morning of her wedding day a letter from her lover saying that he had changed his mind, and was going abroad. She was brokenhearted, but could not, apparently, stifle her love.

Roses, the favorite flower of her faithless lover, were the only blooms she would grow in her garden; his photograph was over the wall and it is believed that she left him all her property. He cannot be found.

Much Like Human Beings

Fish Have Same Ailments and Require Lots Of Exercise

"Fish are very much like human beings. People who have them for pets should realize this and give them some consideration," says Miss Ida M. Mellen, America's only woman fish doctor.

"Fish suffer from much the same ailments that the human species do and they cannot exist if their conditions of life are uncomfortable.

"We have not a lot of people with fish. Take the matter of exercise. If fish get lazy and won't exercise, they get sick. Visitors to the new New York Aquarium, we give them a change of scenery. You would be surprised how much good a swimming ground and an extra amount of sunlight arouses their enthusiasm.

"If fish eat too much of the wrong food, they get indigestion just like humans. And, like humans, they have to take castor oil. I have to fish hold it in their mouths and spit it out later, rather than swallow it. We have to watch them just like children to see that they get their medicine.

"An excellent motto to make sure you get fish food is—Feed Them. Try to imagine yourself in his place. That makes you think."

Postal Clerks Beaten

Could Not Deliver Letter Addressed To William Shakespeare

After three unsuccessful attempts by postal clerks to make delivery, a letter addressed to Springfield, Mass., June 19, to "William Shakespeare, Stratford-on-Avon, England, Europe," and marked "Personal," has been returned to the writer, Miss Rose Lee, 1032 Carew street, Springfield, Mass., with the notation on the envelope attested to the fact that three clerks had tried to deliver it but the fourth caused it to be returned to the country. There is no identity as to the sender, and the contents are not revealed.

Make Payment On Elevators

Payment of 1c per bushel has been made to Saskatchewan Wheat Pool on favor of the Saskatchewan Co-operative Elevator Company, Limited, for $1,264,000.00 in payment of the elevators it has made of that remarkable proposition, Dr. J. C. Kellogg's Asthma Remedy. Then relief comes with a rush. Life becomes worth living, and, if the remedy be used persistently, the disease is put permanently to rout. Take no substitute.

For every dollar Canadian tourists spent in the United States in 1927, American tourists spent four dollars in Canada, it is said.

A mixture of very fragrant and mild tobaccos

Life Not Made For Ease

The Successful Life Must Be Lived Dangerously

Life to be lived successfully must be lived dangerously. This recent remark by the distinguished British scientist, Sir Arthur Keith, carries the wisdom that only persons of experience will recognize.

As we start out in life, safety seems the ideal. If we could only attain it we feel we would be happy, but as time passes, we see there is no such thing as safety. We are wrong. What a hazard is involved! But the chance of a successful outcome is worth far more than all the risk.

Children come. Sickness may overtake them. They may go wrong. But again the risk is worth while. We strive for a job where we may not make good. But if we took no chance we would get nowhere. As we go on we discover that the apparently satisfied and successful business man has walked the floor many a night. He has constantly risked disaster for the sake of an uncertain gain.

No, life was not made for ease. It was made for adventure, and only those who take the risks involved can hope for the great rewards of family and friends and achievement.

The successful life must be lived dangerously!—Kansas City Star.

Safeguards the Future

Famous London Paper Adopts Plan To Maintain Independence

"The London Spectator" announces that it has been largely influenced by the "Times" in 1924, whereby its future control will be so safeguarded that the journal will "never fall into the possession of unworthy hands or of a great newspaper combine, whereby its independence would be sacrificed."

For this purpose a committee has been established for the special purpose of safeguarding future transfers of 51 per cent. of the ordinary shares, now held by Evelyn Wrench.

The committee will consist of those for the time being holding the offices of Lord Mayor of London, and the presidents of the Royal Society, Royal Historical Society, Royal Geographic Society, and Institute of Chartered Accountants, and the chairman of the Committee of the Headmasters' Conference.

Announces Interim Payment

The Saskatchewan Wheat Pool will pay its shareholders $1 per bushel, first quality, as the interim payment, on all wheat coming in that quarter. This price is the same as the first payment made last year. This means that 97 cents will be the first payment per bushel of No. 2 quality and 92 cents for No. 3.

Approved By His Majesty

The King has approved of the Royal Canadian Army Pay Corps, permanent active militia of Canada, being allied to the Royal Army Pay Corps of the British army. The Royal Canadian Army Pay Corps was organized in 1906. The corps is composed of 12 detachments with corps headquarters at Ottawa.

The Terror Of Asthma comes like a thief in the night with its dreadful attacks robbing the victim of breath. It seems beyond the power of human aid to relieve him. Help is made of that remarkable preparation, Dr. J. C. Kellogg's Asthma Remedy. Then relief comes with a rush. Life becomes worth living, and, if the remedy be used persistently, the disease is put permanently to rout. Take no substitute.

New Grading For Apples

New Order Passed To Meet Requirements Of Small Buyers

To better meet the requirements of householders who buy fruit in small quantities an order-in-council has been passed by the government re scinding the old grade for crate apples which called for a minimum size No. 2 grade for each variety and no culls, and providing what is termed a "household" grade, which includes apples of a minimum size for fancy or No. 2 grade, unwrapped, jumble packed, and sold in boxes or crates. In order to allow for variation incident to commercial grading, handling and packing, the new order permits fifteen per cent. of small stem punctures, and five per cent. by count under the remaining requirements of grade. In the same order amended definitions are provided for peaches grade 2, stated tomatoes and No. 1 grapes.

National Fish Week

Would Popularize Fish As a Main Article Of Food

Canada is to have a national fish week from October 29th to November 4th inclusive. This was decided at the closing session of the annual meeting of the Canadian Fisheries Association in Montreal. For a number of years a national fish day has been observed, usually in October, but dealers have come to regard this as insufficient. The purpose of fish weeks is to popularize fish as a main article of diet.

Yield Is Much Larger

Survey Shows Use Of Certified Seed Potatoes Pays

According to a recent report, a survey has been made to check up the results from the use of certified seed potatoes. This survey which covered seventy-one districts in the United States and eight Canadian provinces and included 11,627 tests, showed that certification on the average increased the yield per acre 36 bushels an acre. The report also states that certification has undoubtedly increased the price received for seed.

Would Be Sensible Law

Motor Brakes Should Have To Pass Certified Tests Regularly

It is strongly suggested that the same should be done in the future when brakes must be tested and certified regularly; and the careful motorist will make no objection.

When it is remembered that 800,000 people were killed or injured in automobile accidents in the United States during the past year and the fact that faulty brakes cause a majority of all accidents, the need for such a law will be realized. It is the height of folly to drive with faulty brakes.

Minard's Liniment — **For Internal remedy.**

It is expected that extensions of railway lines in the Peace River country, Northern Alberta, will be completed in time to handle the 1928 crop shipments, which promises to exceed all previous records.

A fishing rod that registers the weight of each fish as it is caught has been invented and the inventor probably will starve and promptly deserves to.

Appleford Paper Products LIMITED HAMILTON, CANADA

We Need Forcibly Reminding Of The High Position Achieved By Canada In Recent Years

"We have been so dazzled by reports of the wealth and prosperity of the United States," comments The Daily Sketch, "that we need to be forcibly reminded of the position achieved by Uncle Sam's neighbor."

This was called forth by statements made by Hon. P. C. Larkin, Canadian High Commissioner in Great Britain, on the occasion of the Dominion's sixty-first birthday, to the effect that Canadians were the most prosperous and the lightest taxed people in the world today, not excluding Americans.

The Daily Sketch used the correct word, and it is applicable to many Canadians as well as to people of other countries. The prosperity of the United States has blinded us to a full realization of our own enviable position, although continuously state that a very small percentage of United States industry does business at a profit. The reductions at Washington have given us a hope that prosperity is blinded us to the fact that we are less heavily taxed, considering State, municipal and other forms of taxation of which we know comparatively little.

The comparison is not to the discredit of the United States. Its spectacular progress has been dazzling. We have been at fault to the extent that we have permitted it to call our attention away from the advancement we have made, are still making, and are due to make in coming decades. It is gratifying, however, that we have many friends at the court of public opinion ready to proclaim the greatness of this country. Newspapers and other periodicals at home and abroad are giving more space to the Dominion's resources as a field for finding co-operation from men high in finance, industry, mining, agriculture, transportation and general business. A striking example of this is a supplement issued by The Manchester Guardian devoted to "Commercial and Industrial Canada."

Mr. Larkin pointed out in an interview in The Daily Express, that, according to estimates, 60 per cent. of Canadians are living in cities and in their own homes. This is a unique position indicating both prosperity and stability. The cities and towns have entered an era of big business, their net production in 1925 being estimated at $2,000,000,000. They are contributing about three to fifteen times per trade, with 110 countries, as compared with $616,000,000 twenty years ago with the exception of the agricultural wealth of the Dominion as years ago was $6,700,000,000, and the gross agricultural revenue $1,388,000,000. Last year the former was $7,903,000,000 and the latter $1,736,000,000. The United States cannot show so high a percentage of home owners in the city, or so large a net revenue per acre of land cultivated in the country.

The Dominion's wheat crop exceeds $500,000,000 in value yearly. The revenue from forest products is approximately the same, while that of mineral output is half as much, double what it was fifteen years ago. Canada stands third among the nations of the world in gold production. It is also third in the per capita use of electrical energy. It is fifth as a manufacturing country with a population of less than 10,000,000.

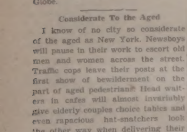
Would it be too much to say that if other countries have been dazzled by the progress of the United States, that country has been dazzled by the prospects awaiting here? In 1910 United States investments in Canada aggregated $417,000,000; in 1927 they totalled about $3,000,000,000, more than half of the total amount of foreign capital, including that from the United Kingdom.

This is a fact for Britishers and Canadians to keep in mind.—Toronto Globe.

Considerate To The Aged

I know of no city so considerate of the aged as New York. Newsboys will escort their work to escort old men and women across the street. Traffic cops leave their posts at the first show of bewilderment on the part of aged pedestrians. Head waiters in cafes will almost invariably give elderly couples choice tables and even conductors and motormen look the other way when delivering their hats or wraps. It is rather pleasant to be old in New York.

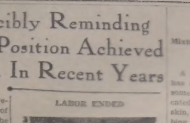
Woodrow Wilson, Calvin Coolidge, Herbert Hoover—there must be something in alliteration when presidential candidates are named.



"What are you doing with that ladder?"

"I intend to steal a kiss!" — Pages Gates, Yverdon.

LABOR ENDED



Bishop Pinkham, 40 years Anglican bishop of Calgary, and the longest consecrated bishop in the British Empire, died in Calgary recently.

Guard For Bank Of England

Building Well Protected By Soldiers From Wellington Barracks

The Bank of England has a guard of soldiers. Each night the Wellington company detailed for duty during the coming night leaves Wellington Barracks, marches to the city via the Embankment and Queen Victoria street, and is seen by the, passer-by entering the bank by the main gates, which are promptly closed.

The Bank Guard was instituted in the time of the Gordon riots, when the building was threatened on more than one occasion. The new innovation was described as a "Bloody Hood," or "Finger Hat," a name it still retains in the Dutch. It is also the origin of the name given to the sentry on duty at the outer wall of the bank, behind the masonry there runs a gallery for use by patrols in time of emergency, and have been from time to time made in this century about 1693, when letters patent were then granted to John Lithgold to allow him to make "thimbles for men, women and children," to save the heavy importation from Germany.

In 1822 there were 20 thimble-makers in England; in 1832, 19; and in 1835, the number had risen to 29, the materials employed being gold and silver, and also tortoiseshell. At first only women and boys were employed in the trade, when brass was used in the manufacture of thimbles.

The English name, by the way, comes from the Anglo-Saxon "Thuma," a thumb.

History Of the Thimble

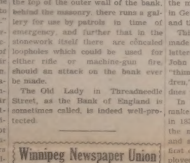
Was Invented By Netherlander In Early 17th Century

It is said that the invention of the thimble is due to a Netherlander of the early 17th century, or thereabouts.

According to the story, the lady of his fond heart was fond of fine needlework, and his offering to her was a thimble. He presented it to her, own to protect her dainty finger from being frequently pricked. In the language of the country the new invention was described as a "Finger Hood," or "Finger Hat," a name it still retains in the Dutch. It is also the meaning of the name given to the sentry on duty at the outer wall of the bank, behind the masonry there runs a gallery for use by patrols in time of emergency, and have been from time made in this century about 1693, when letters patent were then granted to John Lithgold to allow him to make "thimbles for men, women and children," to save the heavy importation from Germany.

In 1822 there were 20 thimble-makers in England; in 1832, 19; and in 1835, the number had risen to 29, the materials employed being gold and silver, and also tortoiseshell. At first only women and boys were employed in the trade, when brass was used in the manufacture of thimbles.

The English name, by the way, comes from the Anglo-Saxon "Thuma," a thumb.



World's Largest Oak Tree

Probably the largest oak tree in the world is the Hooker oak which stands in Chico, Cal., and probably has been standing there for at least 1,000 years. It is more than 100 feet high, its longest branch extends 105 feet from the trunk, and the spread of its branches is now more than 200 feet. It is the tree under which General W. T. Sherman estimated 7,000 men could stand in the shade.—The Farm Journal.

Call Off Army Manoeuvres

Germany's combined fleet and army manoeuvres on the Baltic coast in September have been called off to have money for the country's national coffers. The Nationalist press scores economy as an alibi, and the "red trend of the socialist government" is blamed.

No man is ever so friendless that he can't find some one to jolly him along.

Experience is the only teacher that can get anything into the head of the man who knows it all.

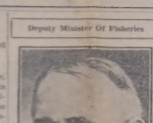
He who marries well marries neither his inferior nor his superior.

Mange In Swine

Mixture Of Raw Linseed Oil, Tar Oil and Sulphur an Effective Remedy

A skin disease, sarcoptic mange, has appeared from time to time in some parts of the country. It is indicated by untruthfulness, dryness of the skin, accompanied by continuous rubbing or scratching. In advanced cases rubbing is sometimes continued until the blood appears. The disease is confined almost entirely to the summer season. The Scott, Saskatchewan, Experimental Station had occasion to deal with this disease, and from their experience can recommend a mixture of raw linseed oil, tar oil, and sulphur, prepared by heating one gallon of raw oil by suspension in hot water and adding to this eight ounces of oil of tar and two pounds of sulphur, stirring in while the oil is hot. This preparation is applied warm by the use of a rag, to all parts of the body. The rag is merely moistened with the mixture to avoid blistering. Four treatments at ten-day intervals effect a cure. Before the third treatment the animal's pens were thoroughly cleaned out, and the walls and floors sprayed with a strong solution of coal-tar creolin disinfectant. Referring to these experiments in the 1927 report of the Scott Experimental Station, the superintendent states that it is not necessary to whitewash the walls brighter than six feet from the floor.

Deputy Minister Of Fisheries



W. A. Found has recently been appointed on the new deputy minister of fisheries. Formerly he was director of fisheries until the department decided to establish a separate department. The new department will continue under the direction of Hon. P. J. A. Cardin, minister of marine and fisheries. The work of the marine branch has greatly increased since the advent of radio.

Europe Studies Canada

Demanian Delegation Comes To Canada To Study Method Of Handling Grain

A Rumanian delegation of eight has recently visited Canada for the purpose of studying the system of wheat standardization adopted in this country, with the hope that it may be applied to Rumania. The delegation, who have been sent by the Rumanian government, will visit the wheat fields in Western Canada and follow the grain from the time it is cut on the prairies through its various stages until it is shipped from Montreal or Quebec on out-going steamers. The system of grain handling at Vancouver may also be inspected.

Canada's rapid rise to the position of being the greatest wheat-exporting country in the world is attracting wide-spread attention to the system adopted in the Dominion for handling, grading and marketing wheat.

Experiments With Fertilizer

Superphosphate From Trail Smelters Being Tried Out On Prairies

Experiments to test the value of superphosphates fertilizer for the west are being conducted in all three of the prairie provinces this summer. The material is a by-product of the copper branches co-operating with the provincial universities. The superphosphate being supplied by the smelters of Trail, B.C., where it is a by-product from the mining and smelting industry. The Massey-Harris Company is supplying three drills for each province to work with. These drills are equipped so that they sow the grain and the fertilizer at the same time.

Turkey Scraps Old Titles

New Turkey has decided to scrap all the old official titles left over from the Ottoman regime beginning with the highest military title "Pasha" which henceforth will be "General." President Mustapha Kemal's name will thus be Westernized to General Kemal Mustapha. Kemal instead of the old form Mustapha Kemal Pasha.

No Glamour In War

The romantic and the poet may still strive desperately to keep up the old glamour surrounded the business of fighting. But it is not there, and they know it. There is no "shining armor" left in modern war; only mud and blood and a dulling of office work.

Penumiean Shipped East

Pemmican, made from Buffalo meat, and produced by the big Park Abbatoir at Wainwright, is now being shipped east and north. It is reported to be finding favor with the Eskimo in the vicinity of Aklavik, where a trial shipment was sent.

Helps Grain Yield:

When Wheat Follows Alfalfa Crop Is Much Better

Another claim for a fallow has been proven at the Morden, Manitoba, Experimental Farm. For three years it has been noted that the yields of wheat following alfalfa and grass, have been much higher than those of wheat following grass alone.

The superintendent reports that the influence of alfalfa in the rotations on succeeding grain crops has, in the past three years, been gratifying in evidence. Although a crop of corn intervenes between hay and the first wheat, yet the influence is very great on wheat following the alfalfa, is evident even to the most casual observer. The following are the yields of the differences: "Wheat on corn land following alfalfa and grass, 28.36 bushels per acre; following grass alone, 20.21 bushels. Second year wheat following alfalfa and grass, 27 bushels per acre; following grass alone 17.56 bushels. These yields are from approximately 8 and 9 bushels respectively are it is claimed, due to the sub-surface drainage properties of the deep-rooted crops, as well as the plant food from root residue.

The rotation from which these results were taken includes five years wheat, 2nd wheat, and 3rd oats. Even in the third year the oats grown on the alfalfa land showed a remarkable advantage over those grown on the grass land.

Returning To Home Land

Over Nine Thousand Canadians Came From U.S. In Three Months

Coincident with the report by United States immigration authorities of a decrease in the immigration of Canadians to the United States comes the official returns of the Canadian department of immigration showing that 9,343 Canadians returned from the United States in the last three months.

In the month of June, 3,207 Canadian-born citizens returned from the United States as compared with 3,476 in May, and 2,160 in April. In addition to these 9,343 returned Canadian domiciles returned to Canada from the United States, and 332 naturalized Canadians in the three months.

There were in addition 9,343 immigrants from the United States to Canada in the three months. Manitoba gain leading with a quota of 1,505; New York next with 1,029, and Massachusetts third with 1,000. In all during 70,927 immigrants entered Canada in the three months, including 23,080 from the British Isles and 9,343 from the United States. The number from the preferred countries was 13,-280, as that with the 7,250,000 from the United States, the preferred immigrants totalled 36,522, as against 7,-340 from non-preferred countries.

Hens Sell For $16.66 Each

Japanese Government Places Large Order For Live Poultry From B.C.

After an experimental purchase last year the Japanese Government has just placed a large order for British Columbia live poultry to be shipped to Japan. It is understood that no other poultry-breeding centre in the world could have filled such an order. The birds are to be supplied birds of such quality. Principal breeds are White Leghorns, Barred Rocks, Rhode Island Reds and White Wyandottes.

The shipment is part of a 10-year program and is a direct result of the British Columbia Poultry Survey. Twelve thousand two hundred hens and ten tons last year. It consists of 300 birds and an aggregate value of $5,-000, an average price of $16.66.

Stepping Stone To Success

No Shame In Failure When Best Has Been Done

The news has since more told of tragedies among pupils who have failed in school.

Do not smile at them. They are very serious in the homes where they occur.

And the worst of it is that the failure is often in the teaching, not in the pupils.

There should be no shame in failure when one has done one's best. The right way to look at failures is as stepping stones to success. For every success has failures behind it. Success consists largely of being the majority of the times. Just a fraction over 50 per cent. is enough to swing the batting average to success.

It is a pity that the young cannot be philosophical.

Soon Financially Independent

Canada has for several years been exporting more capital than the total of foreign capital investments in Canada, and is rapidly approaching a condition of financial independence, according to an statement by the Department of Commerce.

First Little Girl: "What's etiquette, Lily?"

Second Ditto: "Oh, that's the noise you mustn't swallow your tea with when there's company."

It would seem that guess work with some folks means that they guess they won't.

The man in the moon doesn't have to go to the movies to see the dog-star.

LE FOULON

The fete of St. Jean Baptiste is a day of particular celebration among the French-Canadians and although weather intervened in the program, one of the most impressive spectacles was eventually presented in Montreal in which many thousands participated. "Jean le Percurseur" was the title of the oratorio given in the Montreal Stadium, which was preceded by a procession of floats representing various well known French-Canadian Folksongs. The float pictured above is entitled "Le Foulon," and was the contribution of the Canadian Pacific Railway towards this popular event. It illustrates the old chanson of that name, sung by the inhabitants in the manufacture or homespun material during the process of shrinking. The singers are the Bytown Troubadours, who made such a hit at the Quebec Folksong Festival.

Development Of Hardy Fruits For The Western Prairies Is Meeting With Good Success

WESTERN SHEEPMEN IN STRONG POSITION

Permanent Feeling Of Confidence Everywhere In Evidence

"Never have I noticed such a permanent feeling of confidence as seems to exist among sheepmen all through the Western Provinces this year," states W. H. J. Tisdale, of the Canadian Co-operative Wool Growers, who has just returned from his sixth annual western tour, during which he motored all through the principal range areas of British Columbia and Southern Alberta, as well as visiting practically the whole of the sheep farming areas of all four provinces. "Not only are the sheepmen confident, but I found the sentiment in respect to agriculture generally among the leading banking and railway officials of the towns and cities, and among large wool growers, have had a wonderful effect on prairie and British Columbia conditions. That live stock is coming back rapidly."

Mr. Tisdale reported a continual trend toward mixed farming. Sheep are now considered to work in well with grain farming, where the property has been fenced. From 100 to 150 ewes are being kept by many half sections where, owing to the abundance of waste feed, their feeding cost is very small. The sheep have been found very useful in keeping summer fallows clean and in helping to solve the weed problem.

"Undoubtedly the most spectacular sheep development has taken place in British Columbia. There, farmers have doubled their sheep population in the past four years, and the Grazing Commissioner, T. F. Mc-Inness, has declared that there is room for 2,000,000 sheep, or more than fifty per cent. of the present total in the province, in the interior of his province alone."

Unfortunately, according to this official of the Canadian Co-operative, the lamb crop of the west this year, due to extreme weather conditions at breeding time last fall did not run to the 75 per cent. average the farm flocks of the west it was well up to average. The wool cuning from this part of the country this year is as good as any western clip he has ever seen, being clean and bright, and of the quality wanted by the Co-operative expects to handle about 300,000 pounds from British Columbia, that with the 750,000 pounds of Saskatchewan and Manitoba, and 1,250,000 pounds from Alberta this season.

Heavy Marketing Of Veal Calves

Sale Last Year Heaviest In Past Five Years

The increase in the dairy cattle population as in straight milk production is largely followed by an increased marketing of light thin veal. Last year the sale of calves for veal in Japan, it is stated by the Department of Agriculture, at Ottawa, on the "Origin and Quality Of Commercial Cattle Marketed in Canada Last Year," the quality of the calves as a whole was disappointing, there being a preponderance of "greasers" and a large percentage of poor and common veal stock. The report, which is distributed by the Publications Branch of the Department, shows that a very small fraction of the price paid by the consumer reaches the man who gathers the beasts, and the drop in the percentage of the Fish Pool hops to increase the returns to the producer without increasing the cost of the ultimate consumer.

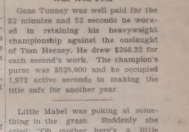
Was Well Paid

Gene Tunney was well paid for the 32 minutes and 43 seconds he worked in retaining his heavyweight championship against the onslaught of Tom Heeney. He drew $246.72 for each second's work. The champion's purse was $525,000 and he occupied fifty active seconds in making the title safe for another year.

Little Mabel was poking at something in the grass. Suddenly she cried: "Oh, mother, here's a little green snake!"

Her mother, one of those cautious women, replied: "Keep away from it, darling. It might be just as dangerous as a ripe one."

The average man is seldom willing to do the things he is constantly telling others to do.



"Don't fall into the [illegible] Vers rente [illegible] Cure of Structural Lungs Kolner Zeitung, Cologne.

How To Order Patterns

Address: Winnipeg Newspaper Union, 175 McDermot Ave., Winnipeg

Pattern No..... Size .....

Name .....

Town .....

Attractive and Practical

An attractive apron that slips over the head with wide straps that will not slip off the shoulders is shown in design No. 418. You'll find it especially apt to make, as it is entirely in one-piece. Printed sateen, English prints, chintz, plain gingham and striped percale are smart suggestions. Pattern is furnished in sizes 36, 38 and 44 inches bust measure. The 36-inch size requires 1½ yards of 32-inch material, with 7/8 yard of binding. Price 25 cents the pattern.

Our Fashion Book, illustrating the newest and most practical styles, will be of interest to the home dressmaker. Price of the book 10 cents the copy.

Most of man's troubles are due to the fact that he does not keep enough of his thoughts to himself.

WORLD HAPPENINGS BRIEFLY TOLD

Announcement is made by the minister of National Revenue, Hon. W. D. Euler, of the coming into effect of the trade treaty between Canada and the Baltic Republic of Latvia.

The British Government will establish agricultural schools to train title coal miners to be farmers, preparatory to their migration to the Dominion to settle upon free land.

Lord Salisbury, Lord Chancellor of Great Britain, heads the nineteen delegates from Westminster on the trans-Canada tour of the British Empire Parliamentary Association.

Plans under consideration of the New York Central Railroad call for the co-operation of the Canadian Pacific Railway in establishing air mail routes between Minneapolis, St. Paul and Winnipeg via Duluth.

Miss Amelia Earhart, the first woman to fly the Atlantic ocean, has sent a cheque for $1,000 to Commander Richard E. Byrd as her contribution toward the Byrd Antarctic expedition.

Believing that Alfred Lowenstein might have been poisoned, the family of the dead man has requested permission to file suit charging an unnamed person with poisoning Lowenstein, in the event traces of poison are found in the body.

Sir Austen Chamberlain, foreign secretary, announced in the House of Commons that Great Britain had reached a compromise agreement over the naval disarmament question which would be submitted to the other powers for study and eventually to a disarmament conference.

The cabinet council has confirmed the appointment of the commission to enquire into matters of the agricultural resources of Manitoba in the province. The personnel will be Mr. Justice Turgeon, of the appeal judge of the Saskatchewan court of appeal; Hon. T. A. Crerar, and C. M. Bowman of Waterloo, Ont.

Hal B. Dady, former editor and proprietor of The Simcoe Reformer and former president of the Canadian Weekly Newspapers Association, is dead. He had been in poor health for some time and retired from active newspaper work several years ago, after he had built up one of the best known weekly newspapers in the Dominion.

Modernizing E.P. Ranch

Electric Plants Furnish Light and Pump Water For Ranch Buildings

The ranch of H.R.H. the Prince of Wales has been electrified. Two large individual electric plants, of the type used by thousands of Canadian farmers, are now in operation on the E.P. ranch, completely electrifying the many buildings which form a small city on the farmstead. Two electric water systems were also installed to supply drinking water, so that kerosene lamps and water from a pump are as rare at the ranch house as they are in the Prince's home in London.

The Same But Different

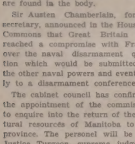
Half a century ago Gladstone coined the expression "the unspeakable Turk." Now, with the growth of self-determination and so forth, the official Turk has decreed laws for himself whereby his race becomes not only to entertain any foreigner in his own home, but also to enter any embassy, legation, consulate or even the private abode of any non-official foreign resident in Turkey. Thus the erstwhile "unspeakable" one has transformed himself into the "unspeak-to-able Turk."

Faster Than the Moon

With the safe arrival of John Henry Mears and his pilot, C. B. D. Collyer, the record of two-night-days for a trip around the world gives way to one of 23 days, 15 hours and 21 minutes. This beats the moon, which takes 27 days and 8 hours, though it is only fair to add that she hugs the outer edge of a track approximately 240,000 miles wide. The handicap is a heavy one.—New York Herald-Tribune.

One of the world's first hospitals was founded by Princess Macha, in Ireland, about 309 B.C.

Flowers fade, but you can always offer them wreaths of smiles.



"What little children go to heaven?"

"Dead ones!"—Sondagsnisse-Stria, Stockholm.

Farmers' Marketing Tour

Canadian National Railways' Tour To Great Britain and Denmark, 1928

(Continued.)

We bade London an early farewell, being on the way to Cambridge by 8.30 a.m., passing through Hillsboro Crop, with its Abbey of the Holy Cross, re-founded by King Harold, in 1060. Chesbunt, which was invaded by the Danes in 893, and Epping Forest, the former royal game preserve, which is now the Londoner's favorite playground.

It would be impossible to describe the charm of the colleges of Cambridge University, its graceful setting among the wonderful lawns through which runs the River Cam, or the beauty of the time-worn masonry. Nor could one hope to convey the sense of atmosphere that time has given to this ancient seat of learning, something of which we caught even in our hurried trip through the grounds. Fortunately, we had the opportunity of visiting King's College Chapel. The tower-like effect of this poem, in stone, the softened light mellowing through the stained glass windows, the dim shadows, the beauty of the carved screen and of the table, all gave us a sense of privilege, of "atmosphere," for surrounding us were portraits of some of the famous men of England, and in the Middle Ages, visible evidence of her continuity with an illustrious past.

The delightful session was followed by an address of welcome from the Vice-Chancellor, Dr. Weeks, sitting at the head of the table. Again we felt the sense of privilege, of "atmosphere," for surrounding us were portraits of some of the famous men of England, and in the Middle Ages, visible evidence of her continuity with an illustrious past.

Regarding to one of the Fellows of Trinity, Sir Isaac Newton, whose statute, we listened to Professor T. B. Wood, Professor of Agriculture and head of the Chemical Section, who described to us some of the experiments which had been conducted with a view to finding the most economical rations for pigs, cattle, horses and poultry.

Professor Wood, who was director of the Plant Breeding Institute, described the experiments which had led to the production of Yeoman Wheat, a wheat of high yield and possessing some of the qualities of the harder wheats of Canada.

Under the Fenman Section, we saw specimens of our own Douglas Fir, Hitz-e-rye hybrid, a cross particular and one of the finest specimens of English oak panelling in the world.

The visit ended with a lunch at which, the chemistry room and the Low Temperature Section were examined. This last was full of interest to us, for here special experiments and tests for discovering the best methods of curing fish and refining it at low temperatures were being conducted. These and the work of the station were explained by Dr. William Hardy at a meeting in the University Arms Hotel, after which Cambridge undergraduates entertained us to a musical programme.

The itinerary for the following day provided for a visit to one of the most remarkable concerns in the world, Chivers & Sons, Ltd., of Histon. Fifty acres of fruit trees, an orchardista, selling fresh fruits on the Cambridge and London markets, but a glut which forced them to sell to Chivers, who manufacture under their whole policy. They determined that their employees should have jams. They enlarged their orchards. Insect pests led them to keep poultry. The failure of hens to keep down the orchard pests induced them to add sheep. Chivers went on to cattle, pigs, sheep and bees. Today Chivers farm 4,000 acres of land, and have annually 12,000 chicks, 6,000 ducks, and 2,000 pigs. Histon cattle have won 600 prizes, ribbons, cups and shields, but a glut which forced them to sell to Chivers, who manufacture under their whole policy. They determined that their employees should have jams. They enlarged their orchards. Insect pests led them to keep poultry. The failure of hens to keep down the orchard pests induced them to add sheep. Chivers went on to cattle, pigs, sheep and bees. Today Chivers farm 4,000 acres of land, and have annually 12,000 chicks, 6,000 ducks, and 2,000 pigs. Histon cattle have won 600 prizes, ribbons, cups and shields, seven firsts and four second prizes at the Royal Show of all breeds, and five championships were included. During the war years Chivers at the 1925 and 1926 Royal Shows. They been no less successful with their Yorkshires and Middle Whites in winning championship awards. They also breed Suffolk sheep and Percherons.

It was our pleasure to spend half a day inspecting as much of the farms and orchards as could be covered in that time. Among the animals we saw was Histon Wild Queen, champion at the Royal Show, whose annual milk yield with her first five calves was 11,840 lbs. The Histon Dairy Shorthorn herd is a genuinely dual purpose herd. Many of the cows exceed 1,000 gallons annually. There is also a Lincoln Red shorthorn herd of 150 females. Their Yorkshire and Middle Whites are the most outstanding to be found anywhere and it was an inspiration to see the remarkable size, smoothness and health of these animals.

But famous as the concern is as a farming organization, it is the combination of farming, manufacturing and marketing which makes this firm unique. From Chivers factory a tempting array of goods leaves every day. The factory is the last word in efficiency. The pans in which the fruit is boiled are lined with silver. Jam jars are filled by machines at the rate of 150 to 200 jars per machine per minute. Miniature trains carry the products from department to department. Everything is kept moving. Not a moment is lost, yet there is no hurry, while the workers were evidently contented and happy thanks to the personal interest that is taken in their welfare and the distribution of opportunity and profit-sharing. What a contrast from the little barn, still standing, in which the first boiling was made.

Before leaving we were entertained to tea in the company's dining hall, when Mr. J. H. Chivers and Mr. W. H. Chivers told us something of the history of their famous firm and presented every one of us with two tiny jars of jam, exactly like those which were specially made for the Queen's Doll's House, exhibited at the great Wembley Exhibition, in 1924. These little jars of jam are the smallest in the world.

No finer lesson in the marketing of farm products, and for that matter in the growing of them, could have been given to a party of farmers or more interesting afforded us in the learning of it.

(To Be Continued.)

OUTSTANDING EMPIRE FIGURES

Outstanding empire figures who have achieved world-wide distinction are included in the list of British Parliamentary Association delegates who will begin a tour across Canada on August 24, from Quebec city. Among the party will be those pictured above: (1) being David Kirkwood, Glasgow Socialist, member of the House of Commons, whose fiery remarks once caused his suspension; (2) Sir Patrick McGrath, well-known journalist and president of the legislative council of Newfoundland; (3) Viscount Peel, former secretary of state for India and now commissioner of works, whose duties include supervision of the Tower of London and royal residences; (4) Lord Thomson, ex-secretary of state for air, who believes future travel will be by aeroplanes serving as imperial links; and (5) Thomas Shaw, who started work as a weaver when ten years old and who became minister of Labor in Ramsay MacDonald's cabinet in 1924.

Parliamentary Association Tour

Lord Chancellor Of Great Britain Will Head Delegates From Westminster

Lord Hailsham, Lord Chancellor of Great Britain, will head the nineteen delegates from Westminster on the trans-Canada tour of the British Empire Parliamentary Association. Included in the British delegation will be Viscount Peel, first commissioner of works; Sir Samuel Hoare, ex-minister of agriculture; Lord Thompson, ex-secretary for air; Hon. Thomas Shaw, who was minister of labor in the Labor government. They will tour the nine provinces till October 5, when they will sail for Sydney.

Stabilizing Easter

Hoped That International Agreement Will Be Reached For Fixed Dates

The measure stabilizing Easter in Great Britain and Northern Ireland, given third reading in the House of Lords recently, will not be effective until an international agreement has been reached, it is stated.

The bill provides for observance of Easter on the Sunday after the second Saturday in April, instead of determining the date by the phases of the moon.

Knew His Ruth

The Sunday school teacher was speaking. "This morning we have for our subject Ruth: Ruth, the Gleaner. Now who in this class can tell me anything about Ruth?"

A small boy raised his hand.

"Well, Willie, what do you know about Ruth?"

"Please, ma'am, he cleaned up 60 home runs last season!"

Seeking Information

A witness was being examined. "My Lord," he said, "you can believe my statement, for what I say is said is absolutely correct. I've been wedded to truth since my childhood."

"Quite so," replied the Judge, "but what the court wants to know is how long have you been a widower."

A Cheerful Personality

People Who Are Pleasant and Sympathetic Have Many Friends

There are smiles and smiles, but the one from the heart is the one which is always remembered.

Forced pleasantness is never convincing. The happy faculty of listening gracefully to another's woes and never talking of one's own troubles is the thing most difficult to remember and will do more toward lightening life's burdens for the sad ones than anything you may do. Everyone is troubled and the talk of it. No one cares about your own distress. If you can listen gracefully when your own heart is heavy and smile like you mean it, your work for that day is well done.

Cultivate a cheerful personality if you would be popular. No one wants a grouch in the party. Laugh and the world laughs with you is as true today as of yore, and becoming more and more so as time goes by. Life is so short and there is so much to be lived, that sorrowful persons have no place in the scheme of existence.

Indians Surrender Lands

12,000 Acre Blocks In Saskatchewan To Be Sold

W. M. Graham, Indian Commissioner for the Prairie Provinces, announces securing the surrender of 12,460 acres of land on the Little Pine Indian Reserve in the Battleford, Sask. district. It is all good farming land, but much too extensive for the 60 persons then in possession. The land will be sold at public auction and the proceeds applied to improve the living conditions of the Indians.

Increase In Immigration

Immigration to Canada for June amounted to 20,305, as compared with 18,052 for June a year ago, an increase of 12 per cent., according to a statement made today by the department of immigration and colonization. For the three months April, May and June, immigration has amounted to 70,927. The principal sources have been British, 25,695, and United States, 9,343.

Sees Good Market In Canada

Great Britain Waking Up To the Importance Of Canada As Trade Centre

"In the past two years the British manufacturer has been waking up to the importance of Canada as a trade centre, and for this reason the Overseas Trade Department is recognizing and improving its system in this country in an effort to bring the necessary facts before the manufacturers of the Old Country," said W. J. Glenny, Inspector General for the organization in question, upon his arrival in Montreal. "We are not here to wave the flag, and ask Canadians to buy British goods merely because they are under the Union Jack, but we want to create an organization here that will enable the manufacturer in England to become acquainted with the problems and requirements of Canadian importers," he stated.

Raise English Pheasants

Experiment Is Being Made To Introduce Game Bird In Saskatchewan

An attempt is being made in the Assiak and Luvera districts in Saskatchewan, to raise English pheasants of the ring-necked variety. It is not many years since Hungarian partridge was introduced into Western Canada. The experiment will take take some years, it is said, and if successful will furnish an added attraction for bird hunters.

Winnipeg Newspaper Union

Jathon

DELEGATES FROM RUMANIA

Judging by the smiles of the two Roumanian delegates to the Baptist World Congress held in Toronto recently soup tastes the same in any language. The picture was taken in mid-Atlantic on the Canadian Pacific liner "Montroyal" which was chartered by delegates to the Congress from Europe. There were thirty-eight different nationalities in the party.

SUNDAY SCHOOL LESSON

AUGUST 12

THE COUNCIL AT JERUSALEM

Golden Text:—If therefore the Son shall make you free, ye shall be free indeed.—John 8:36.

Lesson: Acts 15.1-35; Galatians 5 1-15.

Devotional Reading: Psa'm 133.

Explanations and Comments

Trouble-Makers From Jerusalem, verse 1. Jewish synagogues were conquered if Jews and proselytes, the latter being Gentiles who had received the Jewish rite of circumcision. Other Gentiles who attended the synagogue services were called "God-fearing" or "devout," but were not "full fellowship" with the rest because they had not been circumcised. We have seen how Paul and Barnabas preached to the Gentiles and founded churches among them at Pisidian Antioch, Lystra, Iconium and Derbe on his first missionary journey, and how he reported to the church at Antioch of Syria, the church which had sent them on their mission, that "God had opened a door of faith unto the Gentiles." The church at Antioch, itself composed largely of Gentiles, rejoiced over the good news, and did not realize the far-reaching effect of this new departure. When the report reached the church at Jerusalem, however, it was not so. Certain men, on their return

Hon. Ramsay Macdonald Says British Government Due For A Hard Blow

Quebec, Que. — In an interview with newspapermen here, Right Hon. Ramsay Macdonald, former Labor premier of Great Britain, said that he would not visit the United States. His visit, he said, would be confined to Canada.

Mr. Macdonald, accompanied by his three daughters, Isabel, Sheila and Joan, arrived in the ancient capital on the liner Empress of France from Southampton.

After stating that his tour would be confined to the dominion, Mr. Macdonald discussed the recent agreement reached between railway employees and employers to accept a reduction in wages. He said that the Labor Party said that in reality it was not a reduction because the employees had formerly received wages thus getting permanent employment instead of irregular work.

Commenting on the coming general election in Britain, Mr. Macdonald said:

"The Conservatives are most decidedly due for a hard blow. The country is disgusted with the government. In its term of office it has done absolutely nothing toward stabilizing the country's natural resources and attempting a real solution of the unemployment situation, except what it has done for itself. The party surely is in for a big drop, that is if they go before the people and do not employ another fraud like that of the Zinoviev letter.

"The Liberals will make no headway. I am convinced. They talk of pulling the Conservatives in the field; I am certain that if they do so, at least 250 of their men will forfeit their deposits. The real issue in the country is mostly of the opinion they are not a live party.

And Labor? You ask me whether I think the Labor Party will go into power? That is not a subject on which I can prophesy, but again I say that if the election is conducted on the issues of the day, the present government will get a very hard knock.

"Of course we of the Labor Party are under a handicap. The Conservatives are organized for a strong campaign, and you must remember that they have newspapers behind them. The only paper that presents our views is our own paper, and that only circulates in our own circles."

Franco-German Friendship

Cologne, Germany—A strong plea for Franco-German friendship was made Thursday, the fourteenth anniversary of the declaration of war between Germany and France, when the French Minister of Education, Edouard Harriott, arrived here to visit the German press exhibition. M. Herriott was accompanied by a crowd of prominent French educators.

Liner Makes Record

Montreal.—Establishing a record of six days, nine hours and thirty minutes from Liverpool, the Canadian Pacific S.S. Duchess of Bedford was greeted here with airsea and bunting recently. The Duchess had clipped nearly a full day from the record held by the C.P.R.S.S. Montrose.

Low Suits Total Millions

Budapest, Hungary.—Lawsuits totalling $300,000,000 have been instituted in the international tribunal at The Hague against the Hapsburg-Slavian Government by the former Archduke Frederick of Austria and 25 others. The suits are based upon confiscation of property. Frederick claims a loss of $37,000,000.

Visit Will Be Short

Winnipeg.—It is unlikely that the prime minister on his forthcoming Western tour will address any meetings in Saskatchewan other than in his own constituency of Prince Albert. The haste is occasioned by the necessity of the Premier's presence in Paris at the end to sign the Kellogg outlawry of war pact.

Hickman Case Proceeds

San Francisco, Cal.—William Edward Hickman, youthful slayer of Marion Parker, Los Angeles banker's daughter, was one step nearer the gallows today, as the state supreme court denied the petition for a rehearing of the case. Hickman is expected to be sentenced to the gas chamber within sixty or ninety days.

Kellogg Going To Paris

Paris.—Secretary of State Frank B. Kellogg has sent word to M. Briand, Foreign Minister, that he will come to Paris to sign the multilateral treaty renouncing war, sailing from New York on the French liner Ile de France, on August 18.

Fund Is Growing

Stockholm. — The cancer fund, which was begun as a birthday tribute to King Gustave on his seventieth birthday, already amounts to $1,500,000, it was announced. The fund will be applied by His Majesty's wish to cancer treatment research.

All-Canadian Phone Service

Gap Between Sudbury and Fort William Has Been Bridged

Toronto.—An all Canadian telephone line linking Ontario and Quebec with the Twin Cities at the head of the lake and Manitoba was officially opened and the necessity of switching calls through the U.S. will thereafter be eliminated.

The Canadian Pacific Railway, Bell Telephone Co., Manitoba Government Telephone system and the municipal system of Fort William and Port Arthur co-operated in the project.

The gap to be bridged was the sparsely populated section between Sudbury and Nipigon, former connection between existing long distance telephone systems was made via the C.P.R. right-of-way.

Scores Double Victory

Vancouver Boy Wins Twice In Olympic Sprinting Event

Amsterdam.—Percy Williams, of Vancouver, sent the Canadian flag to the top of the Olympic pole for the second time in three days, in token of victory in the 200 metre dash of the games. The youthful sprinting marvel won the 200 metres final against Walter Rangeley, the best and most seasoned sprinters in the world, including Jackson Scholz, of the U.S., the little holder. Williams is the Olympic champion of the field; and is certain that if they do so, at least 250 of their men will forfeit their deposits. The real issue in the country is mostly of the opinion they are not a live party.

And Labor? You ask me whether I think the Labor Party will go into power? That is not a subject on which I can prophesy, but again I say that if the election is conducted on the issues of the day, the present government will get a very hard knock.

"Of course we of the Labor Party are under a handicap. The Conservatives are organized for a strong campaign, and you must remember that they have newspapers behind them. The only paper that presents our views is our own paper, and that only circulates in our own circles."

Brings Message From England

Boy Scout From Westminster Going To New Westminster B.C.

Quebec.—En route to New Westminster, B.C., where he will convey messages from the mayor of the city of Westminster England, to the mayor of New Westminster, B.C., and from the first Westminster troop of Boy Scouts to the Westminster troop on the Pacific, Jack Turbie, a member of the British Boy Scouts reached Canada recently on the Montnairn.

He came over as a member of the Canadian Scouts' contingent crossing the Atlantic.

Death Of Mrs. W. S. Fielding

Ottawa.—Mrs. Hester Fielding, wife of Right Hon. W. S. Fielding, former Canadian minister of finance, one of the capital's most distinguished women in social and philanthropic circles, died at the family residence here. She had been failing in health for some time past, and had been almost entirely confined to her home throughout that period. Mrs. Fields, who was born in Nova Scotia, celebrated her 80th birthday.

Left a Fortune

Hamilton, Ont.—Lady Hendrie, widow of Sir John Hendrie, one time lieutenant-governor of Ontario, left an estate of $500,000, it was disclosed here by a will left to her son, Major William Ian Hendrie. The estate is composed of a personal fortune of $362,300, bonds and currency amounting to $494,459 and real estate valued at $8,850.

On Way To Far East

Montreal.—His Royal Highness, Prince George, the King's youngest son, will leave Montreal August 18, aboard the Empress of Australia. Prince George is on his way to the far east where he is going to join the China flagship. From Quebec he will journey by train to Vancouver.

To Attend Dry Congress

Washington.—For the first time the American Government will be officially represented at the Congress of International Congress Against Alcoholism, which convenes next month in Antwerp, Belgium. Commissioner of Prohibition Burnham Butesu, and Harry A. Anslinger, of the State Department, have arranged to attend.

Countess Is Rescued

New York.—Drifting helplessly in mid-ocean, their radio apparatus inoperative, and unable to guide searching ships, Captain Frank T. Courtney, British aviator, and his three flying companions were rescued after a flying boat in which they had attempted to fly from the Azores to Newfoundland.

No Car Shortage For Crops

Winnipeg.—There is no shortage of cars for handling of this year's grain crop, the railway association of Canada has announced, but there was every possibility that the harvest will be the heaviest in years and all of the 80,000 cars now in Western Canada, probably will be needed.

Woman Fencer Wins

Amsterdam.—Helene Mayer, 17-year-old German girl fencer, won the women's Olympic championship in a fencing match, emerging victoriously over a field of the best blade wielders of her sex in the world.

Initial Pool Payment

Statement Made That Payment On Current Year's Crop Will Be Same As Last

Saskatoon.—The initial payment by the Wheat Pool on the current year's crop will be the same as last year, according to B. Cattan, of the Central Selling Agency, representatives of different pools of the Saskatchewan Pool. This means that the first payment on No. 1 Northern wheat delivered at Fort William will be one dollar per bushel, 97 cents for No. 2; and 92 for No. 3.

Despite the fall that wheat has taken in price during the past few weeks, the pool is not worrying, Mr. Cattan stated, and it has every hope of marketing the crop to advantage. Discussing the cut-off date that is in demand by so many farmers, he said that he was not in favor of it except in the exceptional circumstance of wheat failing to such a low level that the non-pool farmer, sensing the opportunity to better himself by selling the pool, attempted to come in at the last moment.

Fewer Leaving Canada For United States

Figures For Year Just Closed Show 11,448 Less

Montreal.—Emigration from Canada into United States along the eastern section of the boundary decreased substantial amount during the fiscal year ending June 30, 1928. Figures for the year are announced by H. R. Landle, United States Commissioner of Immigration at Montreal, head of District No. 1, which extends from Halifax to Kingston. In this district, which roughly covers the eastern boundary, emigrants admitted to the United States from Canada during the year numbered totalled 34,285 during 12 months ending June 30, 1928. For the previous year the total was 45,631 emigrants, or 11,448 more than in the year just closed.

BRITISH MINERS COMING TO ASSIST WITH HARVEST

London.—Arrangements have been finally completed for 1,000 miners to go from Britain to Canada to assist in this year's harvest, stated Rt. Hon. Christ. S. Amery, Secretary for the Dominions in the House of Commons.

The Dominion Government especially wished that the men be recruited from the mining areas and the British Government would carry out the selection, the minister said. He concluded amid cheers:

"The British Government is greatly indebted to the Canadian government for the readiness with which they co-operated in this arrangement."

Ottawa.—The Canadian Government is not assuming any financial responsibility for the movement of the British miners either coming or going, it was stated at the immigration department recently. The department, however, has expressed its willingness to co-operate in every possible way in placing men who wish to stay in Canada after the harvest is over.

Under the arrangement reached, men who wish to return will have the benefit of the reduced rate that is paid westward. But it is assumed that most of them will wish to remain in Canada, and the problem will then arise of their absorption without increasing winter unemployment in the cities.

HEADS RETAIL MERCHANTS ASSOCIATION

J. T. Crowder, Toronto, was re-elected president of the Retail Merchants' Association of Canada at Regina. He was elected over J. E. Bansegret, Montreal, who was vice-president last year.

Grant For Class "B" Fairs

Will Receive Same Assistance From Government As Given Last Year

Ottawa.—It has been decided by the government that class "B" fairs will receive the same grant in 1928 as they did in 1927. This was stated by Dr. J. G. Grisdale, deputy minister of agriculture, when asked respecting a report that the government was contemplating giving these fairs some measure of assistance.

During the last session of Parliament no appropriation was made for this class, which roughly covers the eastern boundary, emigrants admitted to the United States from Canada during the year numbered totalled 34,285 during 12 months ending June 30, 1928. For the previous year the total was 45,631 emigrants, or 11,448 more than in the year just closed.

During the last session of Parliament no appropriation was made for this class, which roughly covers the eastern boundary, emigrants admitted to the United States from Canada during the year numbered totalled 34,285 during 12 months ending June 30, 1928. For the previous year the total was 45,631 emigrants, or 11,448 more than in the year just closed.

The deputy minister's announcement restores the former status of the class "B" fairs for the current year.

Message From Lost Aviators

Note Found In Bottle Signed By Names Of Elsie Mackay and Capt. Hinchcliffe

London, Eng.—A bottle washed up on the shore near Flint, North Wales, Tuesday, contained a note on which was written, "Goodbye all." Beneath the brief message was signed the names Elsie Mackay and Captain Hinchcliffe, and beneath the names the words "Down in log and storm."

Capt. Hinchcliffe

Must Keep Arctic Rescue Films

Moscow.—The Russian relief committee approved recently the request of aviator Chukhnovsky, of the Russian ice-breaker Krassin, to hand over to General Umberto Nobile films he took when he sighted two men of the dirigible Italia on the ice off Northeast Land. The request to give possible the originals of the film, the relief committee said Chukhnovsky was right, for he had been ordered strictly by the other Russian rescuers to retain all material and data gathered.

Fire-Eater Burned

London, Ont.—Essaying to entertain a few companions by igniting with a match a mouthful of gasoline, Alex Johnstone, young Irish farm hand, was badly burned about the head, chest and arms when the liquid lighted too suddenly. He was blowing the gasoline toward the match flame when the liquid ignited.

Master "Kawin" and Miss "Nicnish" photographed with the Windsor station by admitted with their mistress. Mrs. E. Honcarelli, who is having them sent to Italy for presentation to Marquis de Pinedo, the famous Italian round-the-world flier. They form a "No Good" combination. "Kawin" meaning "No," and "Nicnish" meaning "Good," in Indian dialect. Needless to say, the latter is the lady bear cub with a sunny disposition, and the former a young gentleman with a rather bad temper at times. They were obtained by the General Tourist Department of the Canadian Pacific Railway from Fred. Arnott, who captured them in the Lake Temiskaming district. The two bear cubs are being sent over to Italy, where they will be met by de Pinedo in his plane, and flown to their new home.

Crowds Welcome Nobile Party

Meet Train At Every Stop In Italian Territory

Rome.—"Viva Nobile!" was the slogan of Italy as countrymen of the Polar explorer welcomed him and five other survivors of the dirigible Italia to their homeland.

Enormous crowds met the train at each stop in Italian territory, showering the returning explorers with flowers and gifts of wine, and shaking hands of fellow citizens with their roars of encouragement.

The demonstrations constituted a veritable march of triumph from the northern frontier.

Premier Mussolini sent the prefect of Bolzano to welcome Nobile and his men at the Brenner pass in the name of Fascist Italy. There also were striking demonstrations at Bolzano, Verona, Bologna and Florence.

Lieut. Alfredo Viglieri, navigator of the dirigible Italia, who was in command after the leader's abandonment on the ice after Nobile himself was rescued, was the centre of demonstration all his own. He left the train soon after passing the frontier and went to his home in the little town of Borghetto Santo Spirito. He will, however, be had to stop at Milan, where the prefect and an enormous crowd welcomed him.

The crowds shouted "Viva Viglieri!" and "Viva Nobile!" and added, "Down with the jackals of the anti-Italian press!"

Ottawa Crowds Greet Lieut. Desmond Burke

Rousing Welcome Given To Member Of Bisley Team

Ottawa.—With the plaudits of his fellow citizens ringing in his ears, Lieut. Desmond Burke, of the Governor-General's Foot Guards, who at the Bisley meet in 1924, won the Kolapore Cup, arrived in the capital within one point of duplicating the feat, came home.

He was greeted a spontaneous welcome by large crowds which thronged the central station, blocksaded his entrance and stretched several blocks along nearby streets. Among those on the platform to welcome him in addition to his parents and relatives, were Premier Mackenzie King, Mayor Arthur Ellis, and members of the board of control and the city council.

Plans Visit To Canada

Bisley Winner May Take Part In Dominion Rifle Meet

Montreal.—Arthur C. Hale, winner of the King's Prize at Bisley this year, is coming to Canada according to Lieut.-Colonel Members of Canada's 1928 Bisley rifle team, who arrived here from England. Hale, a 22-year-old gunsmith, of Birmingham, intends it is said, to take part in the Dominion Rifle meet at Ottawa. He has been shooting eight years. His brother and brother-in-law are vets. It is understood that six members of the Australian team also will come to Canada for the same meet.

C. P. R. REVISED BRANCH LINE HAS BEEN SANCTIONED

Ottawa.—The Board of Railway Commissioners has handed down a judgment sanctioning a revised map showing the revised general location of the Canadian Pacific Railway's Swift Current Northwesterly branch, which projects northwesterly in a direction which, it is intended, will ultimately have as its terminus, Willingdon, Alta.

In delivering the judgment, Hon H. A. McKeown, chief commissioner, details the history of the construction of the company's branch lines, and notes the objection of the council of the city of Medicine Hat to any ways that this would be really an extension of the Cutknife-Whitford Lake branch, from which, the Nationalist contend, the Canadian Pacific has not obtained parliamentary authority. Counsel for the Canadian National advanced that the former main of the Cutknife-Whitford Lake line was at Willingdon and that the road to Strathcona could not be built as an extension of the branch.

It was further argued that the Swift Current Northwesterly branch was originally projected from Swift Current to Edmonton via Empress, Cereal, Coronation, Obaton and Camrose. Of this only the portions between Swift Current and Empress, and Coronation and Lorraine had been built.

A revision of the Canadian Pacific Railway Company's plan was accepted in 1919, and the Canadian National contends that the road company is taking advantage of this nine-year-old revision to extend the Cutknife-Whitford Lake line from Willingdon to Edmonton. Exception is taken on the ground that this is an extension of a branch line already constructed.

The chief commissioner reviewed the matter of branch line construction and recommended the diversions asked for.

Expeditions To Arctic Areas Have Reported Making Good Progress

Dominions Urged To Buy British Goods

Extension Of Empire Marketing Board Is Suggested

London.—The Empire Marketing Board, of which Right Hon. L. C. M. S. Amery is chairman, having shown marked development by means of advertising and stimulating buying within the Empire, the suggestion is now made that a similar campaign be extended throughout the Empire.

It is pointed out that the Board's activities have resulted in an increase in the demand for food products, and that the Dominions therefore in turn ought to buy more eagerly from Britain.

The suggestion is made that the Board might accomplish this by a campaign throughout the Dominions, urging all true sons of the Empire to buy preferentially from the motherland.

In this connection Canada's ever increasing purchases from the United States are regarded as making that Dominion as especially favorable field for the Board's first efforts.

The British taxpayers, it is emphasized, have paid for advertising and research which have greatly benefited the Dominions. Hence, it is argued, the Dominions now ought to reciprocate by buying from Britain all goods, especially foodstuffs, that are equal to those of foreign products.

It is expected that the proposed extension of the Empire Marketing Board's powers towards the Dominions will shortly be considered officially.

Wireless Profit Over Million

Amount May Be Expected Yearly Says British Postmaster General

London.—Questioned in the House of Commons concerning the annual receipts of the Beam Wireless Imperial Services, Sir William Mitchell Thomson, postmaster-general, stated that the receipts from the Canada, Australia, South Africa and India had not been all working for a full year.

Based on the current earnings the gross receipts of the British post office from these services, which it operates, could be reckoned at $2,-350,000 annually, and a profit before charging depreciation or interest on number and brother-in-law are vets. It is understood that six members of the Australian team also will come to Canada for the same meet.

Civil Service Council

Hon. Peter Heenan Wants Representatives To Meet The Government

Ottawa, Ont.—Hon. Peter Heenan, minister of labor, stated that the issuing invitations to civil service organizations to select representatives to discuss matters affecting them in order to draft a constitution for a national civil service council. This action is in line with the report of the select standing committee on industrial and international relations, which devoted some considerable time during the recent parliamentary session to this matter. The minister has left the capital for Winnipeg.

Held For Obregon's Death

Mexico City.—Sister Conception Acebdo de la Lata, 32, is under arrest charged with having induced Jose Toral to assassinate General Alvaro Obregon. She is quoted by newspapers as saying: "I hope to be executed. I want to be punished." She did not admit influencing Toral to kill Obregon, but added: "God must have ordered me. He would not have permitted the crime."

Wine Workmen Killed In Ontario Accident

Crushed By Falling Steel Gate On Welland Canal

St. Catharines, Ont.—The crash of the steel gate of lock number six of the new Welland Canal, at Thorold, Ont., caused the deaths of at least one workman and injuries, some of which have proved serious, to about 30 others. About 40 workmen were in the vicinity of the lock when the disaster occurred, and none is believed to have escaped death or injury.

The accident was caused by the boom of the steel gate suddenly falling when an effort was being made to raise a huge 500-ton steel gate into the concrete sides of the lock. Two cranes were at work at the time, one handling each end of the heavy gate. The cable running from the head of the lock held but the boom of the crane at the lower end slipped.

The huge gate crashed into the steel gate below it, jamming the gate in the lock and smashing the steel work fell to the bottom of the lock, crushing the workmen as it fell.

Accepts High Salaried Job

New York.—Captain James Fitzmaurice, member of the trans-Atlantic aeroplane Bremen, has signed a contract at $100,000 a year to fly a plane between the German ports of the North German Lloyd steamship Company, and the trans-Atlantic liners of the company when the vessels are a day's run from port, it was announced in the weekly "Aeronautic Bulletin."

Rescued Prospector Dies

Port Arthur, Ont.—John Helmer, prospector of Duluth, who was brought to the general hospital here after his rescue following 22 days lost in the Nungesser Lake section of the Red Lake area, is dead.

Many Government Appointments To Be Made This Year

Ottawa.—A score of pending appointments face the government before the end of the present year, and considerable activity is betrayed among political leaders as to who shall be appointed and whether the appointment will be made before the prime minister leaves for Geneva or after he comes back.

The ministers plenipotentiary" to Paris and Tokio are to be selected, with first, second and third secretaries. At present Hon. Philippe Roy is spoken of as first Canadian minister to France, but no conjecture has been made as to the Dominion's representative in Japan.

There will soon be two vacancies on the railway board due to the retirement of Hon. Dr. McLean and Hon. Frank Oliver, and there already exists a vacancy on the directorate of the Canadian National Railways Company, it is understood that the resignation of C. A. Magrath from the international joint waterways commission may be accepted this year, which makes another important vacancy.

There are two vacant senatorships due to the death of Senator Cloran and Senator Boyer. There will also be a vacancy on the supreme court bench due to the age limit retirement of Mr. Justice Mignault, while it is further stated that J. Denis, present M.P. for Joliette, is to go to the bench in Quebec. There may be two new lieutenant governors to be appointed in Quebec and in New Brunswick, and there is also talk of the retirement of the lieutenant-governor of Saskatchewan. Two permanent commissions are believed immediate, one being the possible new radio commission, and the other some permanent commission to direct Canada's part in the St. Lawrence development.

This means at least half a dozen important commissionerships.

Severe Sentences

Frequently There Are Good Reasons For Extreme Punishments For Trivial Offences

A resident of Montreal has been sentenced to two years in the penitentiary for stealing a notebook worth twenty cents.

Men on occasion, are given severe sentences for trivial crimes just as boys at school are sometimes given extreme punishments for minor offences. And it seems all wrong — sometimes it is all wrong. But often as not the fact is that the punishment is nominally for a misdeed of little consequence, but is actually the result of a series of misdeeds. That is true of the case just reported from Montreal. The same principle holds good in affairs of life which are far removed from both the courts and the schoolroom, and life has its own ways of punishing the offenders.

The method is not difficult to be punished by disaster the first time he is careless. That has happened, but it is not the rule. It is the habitually careless man, who takes a risk once too often and is caught.

The gambler is seldom ruined by *one* bet. His downfall is the culmination of many adventures with Chance.

The man who cannot think honestly, whose sense of justice is blunted and whose appraisement of himself and the things about him is distorted and valueless—he, also, did not get that way by one mis-step into the realm of dishonest thinking. His was the culmination of an accumulated series of untrustworthy thoughts. Habits of mind, like habits of body, are not formed in a day or in a week.

Yet when the punishment comes, the offender often feels that it is beyond all due proportion to the size of the immediate act which brings it upon him. He forgets what has gone before, the long series of escapes, effluent at last in the ample unexpected reckoning. He is astonished that life is so cruel. And yet, if he had taken timely heed, life might have been quite kind.—Toronto Star.

Criticism Of Local Life

When Reasonably Done Should Be Productive Of Much Good

Congratulations to the local newspapers regularly contain sound criticism of local life—amateur entertainers are praised, amateur sportsmen are written up, men of affairs, business men and women who are responsible for local government are frequently referred to. It is quite right that these favourable and carry out are seldom adversely criticized when such criticism would be of benefit to the public interest, and so on. Yet in cases where editors of local papers maintain an editorial policy of reticence in the publication of reasonable criticism support is not alienated, but respect is created, and, on the whole, general good is done.—From Newspaper World, London.

B.C. Fire Losses Decrease

Total fire losses of $3,622,995 in British Columbia during the year ending December 31, 1927, were $1,- 013,413 less than during the preceding year, it is stated, in the annual report presented to the provincial government by J. A. Thomas, fire marshal.

Canada's Forest Land

Of the total area of Canada, 1,200,- 000 square miles (approximately one-quarter of the whole) is forest land. Less than half of this contains timber of merchantable size (6 inches in diameter) at the present time, and only about one-fifth carries saw-log material (10 inches in diameter).

Relative Love

Mother: "Why, Bobby, I'm ashamed of you—to be fighting with your little cousin. I thought you loved Stephen."

Bobby: "Why, of course, I love him' cause he's my cousin, but I don't like him one bit."

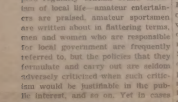
New Character From Dickens

"If any member of my audience," said the man on the stage, "will call out the name of some well-known character in Shakespeare, I will portray that character."

"Florence Nightingale," came a shout.

He—You always have to be of a different opinion.

She—Me? no, not at all; quite the contrary.



"I don't understand how you can shed a tear over such a stupid fellow."

"I wouldn't if the donkey hadn't married to cry best friend."—Der Brummer, Berlin.

MISCARRIAGE OF JUSTICE

Oscar Slater (left) free from an English prison after serving over 18 years for murder. Through the efforts of Sir Arthur Conan Doyle (right), famous creator of Sherlock Holmes, Slater's innocence was finally proven after years of untiring effort.

Kimberley Diamonds

South African Government Would Establish a Diamond Cutting Industry

For some months it has been the determination of the South African Government to establish a diamond cutting industry. Although South Africa is the world's greatest producer of diamonds, the actual cutting and polishing of the stones has been in the hands of experts in Amsterdam and Antwerp. The Dutch merchants are responsible for placing the prices on the New York and London markets.

It was decided that such a profitable industry could be carried on in the same country where the diamonds are found, and with this object in view, a commission was appointed to investigate the whole question. The commission, which has been sitting for about a year, has now issued its report, showing their progress in their endeavors. They began to negotiate with a big diamond syndicate in Holland, Messrs. Rosenthal and Koriof, who were prepared to establish such an industry at Kimberley or in the neighborhood.

There was a surprise development however. It was learned through a chance question in Parliament that a company had been formed in London to establish a diamond cutting and polishing industry at Kimberley on a big scale.

The principal partners in the concern are South Africa's biggest diamond producers—Messrs. Oppenheimer, Rosenthal Company, Ltd., and the sellers, the Diamond Syndicate. It is understood that Lord Desborough, deputy chairman of De Beers, will be chairman of the London board of the new company, which is to be registered in South Africa, and that Sir David Harris will be chairman of the South African board. The company has not approached the Government for any subsidy or concession, but will carry on its business under the diamond laws as amended by recent legislation.

Becoming a Science

"Sitting Up With Sick Friend" No Used As Excuse

"Sitting up with a sick friend" is not always a harmless excuse for a night's absence, according to Dr. Beers, manufacturer of domestic consumption.

The American Red Cross has decided that "sitting up" men do more damage and care of the sick. One of the pledges in most fraternal organizations, the Red Cross points out, is that a member will always be available to aid a brother in need or illness.

The interest of men in such courses, says Mrs. Isabelle W. Baker, national Red Cross director of home service, is encouraging. Although but a group of ten men applied for a course designed solely for them, they have received certificates from every week's work, and a second and larger group is beginning the course.

Changed Her Mind

"Well, madam, why don't you wish to serve on the jury?" asked the judge.

"I'm supposed to capital punishment."

"But this is merely a case in which a wife is suing her husband for an absolute separation on the grounds that $500 to pay down on a handsome fur coat, and he is alleged to have lent the money at poker."

The lawyer spoke up promptly. "I'll serve. Maybe I'm wrong about capital punishment."

"I have discovered a great labor saving device."

"What is it?" said you were a genius. What is it?"

"I am going to marry an heiress."

The man who is always givin, himself away is dear at that.

Merited praise is both agreeable and wholesome.

Decreased Cattle Supplies

Report Shows That Marketing Fell Off Heavily Last Year

The marketings of Canadian cattle fell off last year by some 21,000 head According to the report of the Live Stock Branch on "The Origins and Quality Of Commercial Live Stock Marketed in Canada," there was a reduced volume of cattle weighing 1,200 pounds and up. Steers weighing from 1,000 to 1,200 pounds, both good and common, were also in lower supply, while on the other hand the lighter weights of steers now in popular demand, were about equal to previous recent years. The numbers of unfinished cattle suitable for further feeding showed increases in volume, the total offerings of store cattle being some 36,000 head more than during 1926. In the opinion of P. E. Light, the compiler and editor of the report, which is published by the Department of Agriculture, at Ottawa, the increase in unfinished stock is in large measure due to an insistent demand at strong values for all classes of stock by the home producer as well as by the export buyer, on a short supply. The figures given in the report show that Canadian farmers purchased for further feeding 166,000 head, which was an increase of approximately 4,000 over the purchases for a similar purpose the previous year. This report tells an interesting story of the movement of market live stock showing their origin by counties or districts, their grades or qualities, and their destination, not only for cattle but for calves and sheep and swine.

Raising Swine

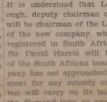
Comparative Costs Of Raising Fall and Spring Litters

It costs slightly more to raise fall litters than spring litters. At the Indian Head, Saskatchewan, Experimental Farm, the litters of eight sows that farrowed in the spring were compared with the litters of six sows that farrowed in the autumn. Of the former ninety-five pigs were farrowed and sixty-eight reached the weaning age. According to the report of the superintendent of the farm for 1927, published by the Department of Agriculture, Ottawa, in the fall littered lot, seventy-six were farrowed and forty-seven weaned. The winter feed was by far the biggest item during the summer when spring litters were under test. The cost of raising the spring litters to weaning was $6.11 per head, and for the fall litters $6.29. These values were calculated on feed cost alone.

Work Is Necessary

Most Essential Thing Which Makes For Successful Farming

"How to be a Successful Farmer" was the heading of an article in a journal that recently came under our observation. It is surprising how much advice has been given from hardy-nosed sons of the soil by horny-handed sons of toil by whitecollared professors on how to make a success of farming. It does not require an agricultural expert to know that there are a host of things comfortable required in farming. There is fall plowing, cultivating for a fine seed bed, clean seed, rotation of crops, the use of adequate manure and commercial fertilizers, adequate labor and co-operative marketing. These, along with thrift, are some of the essentials, but a point rarely ever touched by the theoretical experts is the elbow power necessary to make any manual labor a success. Success is a gentleman farmer, who has inherited enough wealth to boss the job while others supply the manpower.—Chesley-Enterprise.



Simple Business Methods

The late Sir David Yule had his own ways of doing business. He would frequently write all his letters with his own hand—brief letters they were—and rarely used the telephone. These business methods suited his transactions. All details were dealt with by subordinates. He only gave decisions by cables and letters. A few years ago Yule and Sir Thomas Catto, another able Scot, into partnership to relieve him of some of his work.

The Saskatchewan Wheat Pool is rushing to completion 720 additional grain elevators for the handling of the 1928 crops. This will give the pool a total of 950 elevators at country points in Saskatchewan.

Mr. Pester: What's the idea, taking the maid with you to the theatre?

His Wife—Why, to carry my opera-glass, stupid. It's so hot I can't bear to touch them.

Nearly half the 22,500 army animals sold in Canada last year left it for France by the American forces at the end of the World War, are still being used.

Seems the ocean is remarkably calm, considering the way it is continually being crossed.

Sometimes the man who poses as an intellectual giant is merely the possessor of a good memory.

In 1927, spices reached a new high import record—more than 111,202,- 900 pounds, valued at $20,088,000.

The man who wakes up to find himself famous hasn't been asleep.

Honored by Employees

W. S. STOUT

Canada's Grand Old Man of Express Services, Walter Scott Stout, was honored recently at a banquet of officers and employees of the Canadian Pacific Express Company on twenty years service and over on the occasion of his retirement as Chairman of the Board of Directors of the Company. The banquet, with T. E. McDonnell, president and general manager in the chair, was attended by one hundred and sixty employees from every office of the company with a total accumulative service of 4,540 years, or an average per person of 28 years.

The Resourceful Scout

Boys Of Today Learning Many Useful Things

He was only twelve, but the badge upon his new uniform showed that the little scout was advancing rapidly. I watched him as he picked up a piece of flint from among the stones on the edge of the river, and followed him to the tank where he had the "makins" of a cooking fire.

Rasp! Rasp! went the flint on a piece of broken tile. At the third rasp, a spark glowed on his tinder and was quickly blown into flame. Sticks crackled, and the scout looked up with a smile.

"Old Indian stuff" he explained proudly. "Why use matches? A little shaved rag, some cedar bark, a piece of tile, and flint. That's all we need. Stick around mister and I'll show you how to make a meal without pots and pans too."

And he did it—for that is part of this new thing called scouting which is taking up so much of the time of almost half of the boys who ultimately go to college.

Was Well Reminded

He was rather absent minded, and his wife had a piece of cotton round his finger to remind him to get his hair cut. On his way home he noticed the cotton and entered his barber's shop.

"Yes, sir!" said the barber as he cast eyes in his direction.

"Eh? Oh, yes, cut my hair, please," commanded the absent-minded one.

"Certainly, sir," replied the barber, and then, noticing the cotton, added my mentioning the fact that I cut it at lunch time today, will you?"

Good Crop Prospects

Following a tour that took him from Dover to Lethbridge, Hon. Vernon W. Smith, Minister of Railways and Telephones, said that Alberta faced prospects of the largest grain crop in its history. "I don't think I ever saw better growth," he said.

"What does your husband like for his breakfast?"

"Anything I haven't got in the house."

Canada is larger than the United States and Alaska.

To Evangeline Land

1. "The New Yorker", latest addition to the service of the Dominion Atlantic Railway, which will operate on the Digby-Yarmouth and bi-weekly steamship service during the season of 1928. The "Yorker" is 2,000 tons gross.
2. The other 2,000 ton s.s. "Evangeline" of the Eastern Steamship Line who has just made her debut in Yarmouth.

So great has grown the influx of American tourists into the romantic and beautiful districts of Nova Scotia that a special direct steamship service has been inaugurated from New York with connecting train service from Yarmouth to Halifax. The fine 2000 ton vessel of the Eastern Steamship Line, appropriately named the "S.S. Evangeline," made her debut with 150 passengers, aboard in Yarmouth harbor at the southern extremity of Nova Scotia recently, being the first ship to arrive in the port direct from New York, this year 20 years. She is now plying between these two points on a bi-weekly service, sailing on Monday and Thursday from New York and arriving at Yarmouth on the afternoon of the following day. In each case, and returning from Nova Scotia every Tuesday and Saturday. The "New Yorker," a special train of the Dominion Atlantic Railway, which is owned by the Canadian Pacific Railway, connects with sailings of the "Evangeline" and brings Halifax within about seven hours of the port, and other popular seaside and holiday resorts even closer.

Of Service To All

Music Seems To Be Natural Outlet For All Emotions

Servant and master sin I. servant et those mind, and master of those living. Through me spirits immortal speak the messages that make the world weep, and laugh, and wonder and worship.

I tell the story of Love, the story of Hate, the story that saves and the story that damns. I am the incense upon which prayers float to Heaven. I am the smoke which palls over the field of battle where men lie dying with me on their lips.

I am close to the marriage altar, and when the graves open I stand near by. I call the wanderer home, I rescue the soul from the depths, I open the lips of lovers, and through me the dead whisper to the living.

I never sin. I never sin. I never sin. I am the mirror in which are reflected all that is in them, and they are fathers of the best that is in me; I am of the people, and they are of me. I am the instrument of God. I AM MUSIC.

Assets and Liabilities

Britain's War Debt Payments Exceed Sum Received From Debtors

Great Britain received £25,289,000 on account of reparations and allied war debts during the year which ended on March 31 last—£14,500,000 reparation payments and the balance war debt payments.

During the same period Great Britain had to pay to the United States, in the service of the war debt, £83,- 000,000 or £7,300,000 more than she received from her debtors. In the new fiscal year, which begun on April 1, the receipts from war debts and reparations is estimated to be £32,- 000,000. This total is about £845,000 short of the sum to be paid to the United States.

It is just another example of the British way—that rugged integrity that refuses to dodge its obligations and discharges every debt to the full.

Taken From Shakespeare

Phrase "Green-Eyed Monster"' Was Used In Othello

The phrase "green-eyed monster" of a consuming jealousy, a jealousy which corrodes one's thoughts and makes one's capacity for fair friendliness has been with us for hundreds of years

Like so many other expressions which are in daily use, the real impetus to the popularity of the one under discussion was given by Shakespeare.

In his play "Othello," Act 3, scene 3, we find the admonition to which we undoubtedly owe the present currency of the phrase, as follows:

"Beware 'of jealousy, it is the green-eyed monster."

Willing To Oblige

A hotel proprietor, hearing of the wheresabouts of a guest who had left without paying his bill, sent him a note:

"Dear Sir—Kindly send me amount of your bill, and oblige," etc.

The delinquent replied:

"The amount is £10.—Yours, etc."

Many a man has been made by his comrades and unmade by his friends.

There is more power in kindness than there is in dynamite, but it takes longer for people to find it out.

Every time a woman makes a fool of a wise man he charges it to experience and lets it go at that.

Ants can swim, using their six legs like a six-oared boat.

Eyes Require Rest

Should Not Be Used Continuously For Too Many Hours

Older people should use their eyes as they do their legs—have resting spells of from fifteen minutes to a half hour. With young people the resting period is not so necessary, but a person of sixty years should not use his eyes continuously for too many hours.

This is the advice of the State Medical Society in a bulletin.

"At sixty the ordinary person would not go on a walk of ten miles or even eight, without resting," the bulletin reads, "or unless his shoes fitted properly.

"We are sure that you have proper fitting glasses and then rest between periods of reading. Read for half an hour and then do something else for fifteen minutes before reading is resumed. The same applies to sewing."

Near work in an individual over sixty will not lead to injury provided the eyes are not diseased and if the light is good. Poor light is a real threat at intervals. For older persons the most common eye disease is cataract.

Usually 97 per cent. of the cases of uncomplicated cataract under the conditions of modern surgery useful vision is restored," continues the bulletin. "With these facts in mind, the fear of cataract diminishes almost to the vanishing point. And it should, for cataract is much more common than is generally supposed. Recent statistics have shown that a high percentage of old people have some form of cataract. Only a comparatively few cases ever increase to the point where vision is interfered with."

"Old Frigate" Still Used

Historic Spot To Be Marked By Canadian Commission

Among historic places shortly to be marked by the Canadian Historic Sites Commission is the bay at Kingston, Ont., between the Royal Military College and that where the crumbling ruins of Fort Henry are viewed by many tourists. At Navy Bay in 1788, Lord Dorchester, then Governor-General of Canada, built a government naval yard where 14 King's ships were built. At that time the population of Kingston was mostly loyalists, many of whom had come to the shore of the bay and called "The Stone Frigate." The interior was much like the deck of a warship at first, but afterwards it was divided into offices for the naval yard staff and for many years has been used as a dormitory for cadets of the Royal Military College.

It still bears its old name and with its high walls and old world look is a contrast to the grey limestone buildings of the R.M.C. For years the bell cupola on the roof bore the Peninsular war, flung in "The Stone Frigate" to "sound the bells" as they were rung in the British navy. It is the property of Captain Marks and was left by him to St. Mark's church, Barriefield, a nearby village. The bell is defected to Virgin Mary and inscribed in Spanish.

Buffalo Rapidly Increase

5,500 Head Have Been Shipped To Northern Areas

All doubt as to the buffalo becoming extinct in North America was removed when the Canadian Government shipped 5,500 buffalo to Wainwright. Not only have the buffalo not become extinct, but they have increased so rapidly that the Government has found it necessary to send 5,000 head into the far north to shift for themselves. Reports indicate that these buffaloes have turned loose on the northern areas, and will be stored to their natural environment are steadily increasing.

In addition to the 5,500 head shipped into the north, about 9,000 have been slaughtered and buffalo robes and buffalo meat have been made available in considerable quantities. There are still about 4,000 buffaloes in Wainwright Park, which has an area of approximately 100,000 acres.

Some Quaint Definitions

A German boy defined "nothing" as "an air balloon without its cover."

"Mustard," said a youngster, "is what keeps a hot dog from tasting good when you don't put any on it."

"What are the functions of the skin?" asked the English school inspector.

"To prevent us from looking raw," one boy answered.

Jones: "Been down home, have you?"

Bones: "Yep."

Jones: "How did you find your mother?"

Bones: "Locked in the kitchen and there she was!"

The muskrat, fiber bibethicus, is found over most of North America, exclusive of the treeless arctic and the deserts.

The girl who thinks it does not pay to nurture men may be right. But she is more likely to be left.

Migratory Birds Convention Act

Handy Guide For Sportsmen and Hunters For Observing the Law

A summary of the Migratory Birds Convention Act as given below. This is the law which is based upon the Treaty with the United States. Any enquiries concerning this law may be addressed to the Commissioner, National Parks of Canada, Department of the Interior, Ottawa.

Open seasons, both dates inclusive —(Saskatchewan): Ducks, geese and coots, Sept. 15 to Dec. 31. Wilson's or Jack-snipe, Sept. 15 to Dec. 31. (Alberta) North of the Clearwater and Athabasca Rivers: Ducks, geese and coots, Sept. 1 to Dec. 14. Wilson's or Jack-snipe, Sept. 1 to Dec. 14. South of the Clearwater and Athabasca Rivers: Ducks, geese and coots, Sept. 15 to Dec. 14. Wilson's or Jack-snipe, Sept. 15 to Dec. 14.

Closed seasons: There is a closed season in the Provinces of Saskatchewan and Alberta on swans, wood duck, eider duck, cranes, curlew, willet, godwits, upland plover, blackbellied and golden plover, greater and lesser yellow-legs, avocets, dowitchers, knots, oyster-catchers, phalaropes, stilts, surfbirds, turnstones, and all the shore birds not provided with an open season in above schedule.

There is a closed season throughout the year on the following non-game birds: Auks, auklets, bitterns, black-throated divers, cormorants, guillemots, gulls, herons, jaegers, loons, murres, petrels, puffins, shearwaters and terns, and there is a closed season throughout the year on the following insectivorous birds: Bobolinks, catbirds, chickadees, cuckoos, flickers, goatsuckers, grosbeaks, hummingbirds, martins, meadowlarks, nighthawks or bull bats, nuthatches, orioles, robins, shrikes, swallows, swifts, tanagers, thrushes, titmice, vireos, warblers, waxwings, whippoor-wills woodpeckers and wrens, and their nests and eggs, which feed entirely or chiefly on insects.

No person shall kill, hunt, capture, injure or molest any migratory birds during the closed season. Sale of these birds is forbidden.

The killing, capturing, taking, injuring or molesting of the following insectivorous and migratory non-game birds is prohibited. The possession of legally obtained birds, which is allowed in Alberta until March 31, following the open season, and in Saskatchewan until the last day of February following the open season.

Daily Bag Limits. (Saskatchewan): Ducks and geese—30 of all kinds in one day, not more than ducks 10 geese, and 200 of all kinds in a season but not in excess of 30 geese; coots—25 in one day and 50 in season. (Alberta): Ducks—30 in one day and not more than 200 of all kinds in a season. Geese—15; Coots—25; Wilson's Snipe—25.

Guns and appliances: The use of automatic (auto loading), swivel or machine guns or battery, or any gun larger than number 10 gauge is prohibited, and the use of any aeroplane, motor boat, sail boat, power skiff, light, and shooting from any horse-drawn or motor vehicle is forbidden.

The shooting of migratory game birds after sunset and before sunrise or later than one hour after sunset is prohibited.

Penalty: Every person who violates any provision of this Act or any regulation shall, for each offence, be liable upon summary conviction to a fine of not more than two hundred dollars and not less than ten dollars, or to imprisonment for a term not exceeding six months or to both fine and imprisonment.

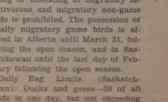
Radio's Debit and Credit

Has Saved World Millions But Costs Much In Sleep Lost

Radio has saved the world $60,- 000,000 says General Manager Sarnoff, of the Radio Corporation of America. What is the value of the sleep it has cost, and is still costing? There is no question but what that is one of the greatest troubles with the radio. It causes a world loss of sleep on the part of its devotees.

Take a man and woman who must be at work at 7.30 or earlier in the morning, who might have spent their day up with the radio until 12 or 1 o'clock and this form of amusement is expensive. The expense is not in actual dollars and cents at the time but in lost rest, reduced energy and, in the end, a breakdown of health.

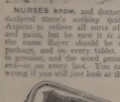
Canada's three far northern districts of Mackenzie, Ungava and Yukon are larger than China (proper.)



Matrimonial Agent: "Yes, the gentleman would like to marry you at once."

Old Maid: "At once? Oh, I wanted to wait a bit."—Nagels Lustige Welt, Berlin.

NURSES know, and doctors have declared there's *nothing* quite like Aspirin to relieve all sorts of aches and pains, but be sure it is Aspirin the same Bayer should be on the package, and on every tablet. Bayer is genuine, and the word genuine—is real—on every box. You can't go wrong if you will just look at the box!



Aspirin is the trade mark (registered in Canada) of Bayer Manufacture of Monoaceticacidester of Salicylicacid. While it is well known that Aspirin means Bayer manufacture, to assist the public we state the word Aspirin identifies the product.

CHAPTER XXIV—Continued.

When Helmi returned to the city she went to the hospital for news of Lili, and she went without fear. She had the assurance of Lili's safety, and as she sat in the small, dark waiting room it did not occur to her that she was a lonely girl in a big city, with a city's evil on every hand. Helmi was already planning her summer and counting the days until little Lili could go to the farm.

The nurse who had so kindly received the baby came to speak to her. "Oh, I remember you," she said smiling, "you are looking much happier than I told you she would be and much the less. She was very ill the second night, but a change came about day break. The fever left her then and she went to sleep and has been doing well ever since. If you will go and sit and stand on the north side of the hospital I will show her to you through the window."

Helmi's face beamed with the prospect. "What will I have to pay?" she asked the nurse.

"Nothing, dear, not a cent. The City provides this hospital, everyone pays for it, so do not worry over that."

"It is like a dream," said Helmi; "everyone is so good."

When the nurse came with little Lili in her arms and Helmi saw the beloved little head of brown hair and the little face like an exquisite flower, her heart was full to overflowing of gratitude, and when the nurse lifted the tiny hand and waved it toward can be.

Thank God, you're alive, Helmi! You gave me an awful scare clarin' out that way with the wild foreign look in your eyes! I'm all not knowin' what you were up to, but I could only pray God to take care of you, for was no time for any of my plans not knowin' where to look for you. My Gosh child, what have you done to your boots?"

Helmi looked her about her flight through the woods, the coming of the dog, and everything.

Her friend could not see any more for the rush of happy tears. So came back into the office again to ask for Roland.

"I almost forgot the other baby," she said; "is he doing well?"

"You are more concerned than his mother!" said the nurse, "though the grandmother has been here several times. He will get better we think. He is a strong baby but a baby needs to be loved. Care is not enough—there is something more."

"I know," said Helmi.

So the little girl in the blooming House Helmi went to explain her absence to her good friends, the Corbetts. Mrs. Corbett was alone, and over a cup of tea Helmi told her story. It was easy to tell Mrs. Corbett; she knew about God and how good He is.

"Look at that now! Ain't God wonderful? That's what Christ said over and over again, only the people couldn't know it. Well, I'm glad you've found peace, Helmi; it's the greatest gift God has sent to us. And you got the money, too? Well, get a new coat at Bentz, child, good strong ones. It's a person has good boots and a good bed they're all right, for you are in one or the other of them all the time. And we'll you go to the Englishman's house, Helmi? But how can you live there alone, night miles from the mines? If you were near enough you could run a boardin' house."

"I am going," said Helmi, "as soon as Lili's well enough. I am not a bit afraid now, and Mrs. Corbett, in the holidays won't you let Rosie and Danny come? We'll get a cow somewhere, and there will be wild berries, and I found a section of lots of flour and oatmeal in the house, and it will be just like a picnic all summer. You will let them come, won't you, Mrs Corbett?"

"It will be a lot easier to let them go than to try to stop them when they hear of it—they're into mischief ever you and the baby. Well, well, well, Helmi dear, ain't it wonderful how things come out?"

When John Corbett came home from the whole story that night, he sat for a long time smoking a meditative pipe. He made no comment during the only sound in the room. Helmi was going to stay with them until Lili could be taken from the hospital. No, he was not occupied, Helmi was to share Rosie's narrow bed, the lack of space of which would be amply overcome by the warmth of Rosie's affection.

Helmi sat on a couch which later would be turned into a bed for Danny, and with her head against Rosie's mother, she fell asleep.

"I am thinking," said John Corbett, after a long pause, "that maybe the Englishman is the best man of the two."

"Oh, no, Mr. Corbett!" Helmi cried, distressed. "Mr. English is my good friend—I like him—he is as good as he can be, but Germany, Jap man—there is a big kilata—what you call difference—isn't there, Mrs. Corbett? I'm not sure."

"Tell him!" said Maggie Corbett, scornfully. "He knows, the sly old dog! He knows. I have often told him I'd rather a Scotchman than a Dane agreein' with any other man. That's love—and he knows it!"

CHAPTER XXX

Vehemoor, German prison camp, known also as Celledger Six, was built on a peat bog from which the peat had been removed, and was a sour, raw mud, on which not even a plank or log was laid. When the prisoners were locked up each night they went to their kines in the indescribable's muck. The condition of the camp made many be maligned. A crowded room of miserable men; two smoking stoves burning the smouldering peat; double rows of berths where the prisoners slept, and undermined the beds; despair written on young faces—despair and bitter hatred.

Here sat Jack Doran, on this wet night in January, 1917, listening to the ghost whistling of the wind in the windows. He had been in three prison camps before this, having attempted to escape from Celledger Six on October One, been caught and strafed, the last time in the dark cells at Oldenburg. He was dressed in the clothes of a soldier who saw the Cross for prisoners, and carried himself with something of his former assurance. His face was thin, and his brown hair, and there were hard lines around his mouth. Two years of war had told on him. Still there was hope in his heart that suggested hope. Many of the prisoners had the beaten look of men whose spirits are broken, but Jack would leave soon for Northern Canada to purchase eighty picked huskies. Twenty dogs, under the leadership of the famous Chinook, already are being trained in the White Mountains of New Hampshire.

The one hundred dogs will be assembled and placed aboard the ship Larsen, at San Pedro, California, about April.

Five of the best dogs will probably precede Byrd's aeroplane over the South Pole, to be available in case of a forced landing or if the plane is unable to take the air again because of the rarified atmosphere, it was said.

Typist Abandons Swim

Miss Mercedes Gleitz, London typist, who last year conquered the Straits of Gibraltar, abandoned an attempt to swim the Irish Channel between Holyhead, Wales, and Portpatrick. The treacherous currents of the channel forced her to quit.

Where Do They Go

Paris reports that every year there are 500 men and women in that city who, many of them prominent and wealthy, who disappear and are never heard of again. Apparently there is no answer supplied to the very logical question: "Where do they go?"

Tired Tim

Tired Tim: "Kind lady, would you mind giving me a headache tablet?"

Housewife: "You poor, poor man! Of course I will!"

Tired Tim: "And I'll have to have a bite before I take it—they're supposed to be swallowed after meals."

Parisian judges still get ten days off each summer to sheer their sheep, under a traditional custom, because in old days each judge was a landowner and wool figured in his income. None own sheep now.

Though crossing watchmen, bells and gates may not halt the speeding reckless driver, the train can always be depended upon to do so.

UNIVERSITY OF MANITOBA

WINNIPEG

Offers, among others, the following Courses:

Through its FACULTY OF ARTS AND SCIENCE: Courses leading to the degrees of B.A., M.A., B.Sc., M.Sc., and D.Sc.

Through its FACULTY OF MEDICINE: Courses leading to the degrees of M.D., C.M., and D.P.H.

Through its FACULTY OF ENGINEERING: Courses leading to the degrees of B.Sc. in C.E., E.E., M.E., and M.A.M.E.

Through its FACULTY OF AGRICULTURE: Courses leading to the degrees of B.S.A. and B.Sc. (Agr.).

Through its FACULTY OF LAW: Courses leading to the degrees of LL.B. and B.C.L.

Through its FACULTY OF THEOLOGY: Courses in affiliated institutions.

Through its FACULTY OF LL.B. For terms of admission, details of courses and other information, apply to

W. J. SPENCE, Registrar,
University of Manitoba, Winnipeg

WELL KNOWN PLACE NAME

Crow's Nest Familiar In Manitoba As Well As In Alberta

One of the best known place names in Alberta is Crows Nest, which is familiar as the name of a mountain, a pass, a lake, a river and a village. The name, according to the Geographic Board of Canada, is first mentioned by Capt. Thos. Blakiston, of the Palliser Expedition, whose report of December 31, 1858, refers to 'Crow's Nest Pass' and 'Crow's Nest River.' The map accompanying the report of the trip of expedition and published in 1865 shows "Crow's Nest Mountain." The mountain name in the original one and refers to the nesting place of crows or ravens, in Cree, ka-ka-u-wut-tih-a-tan, in Blackfoot, Ista-sto-ksas.

The mountain, also known to the white man, is located in latitude 49 deg. 42', longitude 114 deg. 34', but the hill to which the name gave the name would seem to be about eighteen miles further east, for Blakiston, who had been guided by Chief Big Swan, guided Mr. R. N. Wilson, Indian agent, to the scene of the murder of two white men in 1857, and found some compunctions in his early life.

He had stated that it was a crow's nest, but to Mr. Wilson, who headed for a high isolated and prominent hill standing between the Porcupines and the Rockies, and some two miles north and to the eastern entrance to the Crow's Nest Pass. He said this is what the Indians call Nah-Kahthi, and the literally speaking, the "ravens' home"—pointing to the timbered, rocky top of Willson mountain. Crow's nest pass and also that mountain which white men call the Crow's Nest. To this he replied, "and perhaps is the white man's talk. We know not but one 'Crow's Nest' and this is it," and, waving his arm about, "all Indian land—the Kootenay, the Flathead, 'Crow's Nest Country.'" This would account for the name being extended to the neighboring district.

While Crow's Nest may not occur today elsewhere in Canada as a place-name, there is a bay, 1816, which shows a place of that name on Nelson River, Manitoba, and John Long, the fur-trader, who described his travels in the region north of Lake Superior in a book published in 1791, mentioned two Crow's Nest Pass, one near Lake Nipigon, and the other west of Lake Nipigon, specifically stating that they designate localities where crows build their nests.

New Device Useful In Brain Operations

Swiss Scientist Has Perfected X-Ray For This Work

A method of investigating the brain by means of X-ray photographs has been perfected by Dr. Max Ludin, director of the Roentgen Institute of the Cantonal Hospital at Basle, Switzerland. Making use of the contrast method generally used in X-ray examinations of other conditions, Dr. Ludin has been able to locate exactly tumors in the brain, thus making removal of the tumor by operation less dangerous.

Air is pumped into the cavities of the brain where it shows as white, and so the white patch does not show.

In making X-Ray pictures of the medulla, which is the part between the spinal cord and the brain, the fluid is cleally prepared oil is used instead of air. This oil is heavier than the spinal fluid and fills the medullary canal, so it flows down, appearing in the picture as a black strip. If there is no such strip it is evident the stops at the upper edge of the tumor.

Dr. Ludin is now working with an oil lighter than spinal fluid by which he hopes to find the exact node of the tumor, thus locating it exactly for operation.

Prince Albert penitentiary is the only Canadian prison at which cordwood is produced. The last report of the institution showed 2,000 cords.

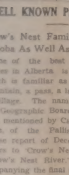
Don't forget this is the day to remember not to forget.

MOTHER OF TWINS HELPED

Restored to Health by Taking Lydia E. Pinkham's Vegetable Compound

Mitchell, Ont.—"I had little twin babies and for quite a while after I was
[illegible] could not do my work because of the baby. I lay all the way up my legs at the back. I also had headaches and got very little sleep. I took Lydia E. Pinkham's Vegetable Compound and soon I was feeling fine. I could do my work. I have taken three bottles and I am fine, do my work without trouble and am gaining in weight and strength. I will gladly recommend the Vegetable Compound to anyone."—Mrs. F. STATTON, Box 229, Mitchell, Ont.

Are You Ready



When your Children Cry for It

Baby has little upsets at times. All your care cannot prevent them. But you can be prepared. Then you can do what any experienced nurse would do—what most physicians would tell you to do—give a few drops of plain Castoria. No sooner done than Baby is soothed, relief is just a matter of moments. Yet you have cured your child without use of a single doubtful drug. Castoria is vegetable. So it's safe to use as often as an infant has any little pain you cannot put away. And it's always ready for the cruller's pangs of colic, or constipation, or diarrhea; effective, too, for older children. Twenty-five million bottles were bought last year.

Has Mastered the Art

Englishman Have Evidently Solved Question Of Standing the Heat

The coolest individual in New York during hot days is the Englishman. He can sit in his hotel room wearing coat and vest and keep cooler than the visitor of any other country. A Britisher rarely will attempt to fight the heat by discarding coat and vest. Rather he will make himself comfortable, order a pot of hot tea, toast and biscuits and take things calmly. The man from the west promptly discards coat, vest, collar, tie and rolls up the sleeve of his shirt. An Englishman who was a guest at the Astor recently, complained of the terrific heat, but throughout a long interview dressed in a heavy tweed suit, with double-breasted vest, and did not show any outward signs of the weather he complained of.

It Bids Pain Begone—When neuralgia racks the nerves or lumbago cripples the back, in the time to test the merits of Dr. Thomas' Eclectric Oil. Well rubbed in it will still the pain, will produce a sensation of ease and rest. A trial of it will establish faith in it.

Room For All

Prairie Regions Capable Of Sustaining Fifty Million People

We have in the prairies a region capable of sustaining at least fifty millions of people; it is the future centre of gravity of Canada's population. If we restrict this interior to so-called Britishers, it will remain sparsely settled until opened up by Oriental compulsion a century hence. The history of France and other European countries shows us that the intermixture of all the races of Europe is not a handicap, but a positive enrichment of national life. What excuse then have we, in the name of reason, self-interest and common decency, for excluding the overflow of crowded Europe? Our methods are not perfect, but our hopes are many. Let us have an end of this timidity-minded contempt for those by whose gifted help we are to build up the rich and richly diversified nation of Wastion Kirkconnell in the Canadian Forum.

There's a Reason

He had just signed "A. Hogg" in the hotel register.

"Why don't you sign your full name?" inquired the prettily and sympathetic clerk.

"I'm a friend of Adam's," grunted the guest.

The man who is constantly hearing from his creditors is a man of letters.

The land lubber says that, if in the right direction, his favorite walk is the gangplank.

Teeth and Health

Issued By The Canadian Dental Hygiene Council and Published By The Saskatchewan Dental Society

MISSING TEETH

Your son is now grown up and should have his full complement of teeth, which is thirty-two.

But the probabilities are that one or more are missing.

Now, of course, the most probable cause for this deficiency is the extractions of earlier years, which you may have forgotten. But, on the other hand, there may be this reason, that the one or more did not erupt.

The teeth more prone to non-eruption are in the order named, the third molar, upper cuspid, upper lateral, and lower second bicuspid.

1. An abscessed condition of a temporary tooth might destroy the germ of the permanent successor.

2. The premature extraction of a deciduous tooth might destroy, through injury, the permanent tooth germ, or beneath or dislodge it entirely.

3. Childhood diseases accompanied by high fever such as scarlet fever and measles, might likewise have general disturbances, injure irreparably the tooth germ.

4. The retention, unduly long of a temporary tooth, might prevent the eruption of its successor.

5. In the case of the cuspid, sometimes it is fully formed, but it has taken up a position, more or less horizontal, lateral to the other teeth, it fails to erupt.

6. With the third molar, we find that it is due to lack of room to erupt, and it remains impacted in the jaw, quite as frequently it does not form at all.

So you observe that a tooth may be missing due to one of several causes and it is well, then, they are preventable, nature intending that each one should have his full complement of teeth.

Designed for Dependability

Firestone engineers found that the life of a tire depends as much upon the flexing life of the cords of the carcass, as upon the toughness of the tread.

To provide extra strength, stamina, and long wear, Firestone dips the cords of the carcass in a rubber solution. This saturates and insulates every strand of every cord, minimizing internal friction and gives thousands of extra miles. The Firestone Dealer in your locality will gladly serve you, and save you money.

May Serve Good Purpose

Latest Tragedy In Arctic Should Discourage Further Exploration By Planes

Although not many men have visited the Arctic and Antarctic, these desolate areas of ice and water have taken a high percentage of their lives, and some of the greatest epics of human endeavor, achieved at the cost of much suffering, and sometimes death, come from these dreadful hinterlands of civilization.

The experiences of the Nobile expedition have filled the world with distress at the knowledge of men drifting for weeks on ice floes, suffering unknown hardships from cold and hunger and physical pain. What happened to some of them may never be known, nor how long they endured and how they ultimately died after waiting hopelessly for succor.

It is just as well, perhaps, that the Arctic keeps its secrets, but the whole adventure will have served some purpose if it causes a revulsion of public feeling against expeditions of this kind. The fate of the Nobile party shows that under conditions as they are likely to be met with in these regions, the airship is no more reliable than the balloon was in the days of Andree. Another tragedy is left for the North Pole nearly thirty years ago and was never heard of again.

Not Always a Drawback

Many Men Make Handicap Stepping Stone To Success

Addressing a race betterment conference some time ago, Dr. Irving Fisher, professor of political economy at Yale, said: "My studies in health arose originally from my own ill health during my college days."

Theodore Roosevelt was noted for his interest in athletic affairs, and yet he was a sickly child and youth.

It is a man's handicap which often calls his attention to the extra effort which will make him a real success. Handicap demands a margin of effort—the margin of effort over what the ordinary man gives a job. Often big results come by the route of serious handicap.

Sounds Like High Finance

As Aberdonian observed a bottle of whisky in a shop window priced at a half-penny. He went into the premises and asked for the bottle, taking a half-penny from his pocket and that the card beside the bottle had fallen from another article, and that the price of the whisky was 12s. 6d.

The customer, however, called a policeman and the officer agreed that if the whisky was priced at a halfpenny the man was entitled to it.

He got the whisky and the half-penny, and when walking out of the shop with the spirit the officer said, "That's an awful way to make over a bottle of whisky."

The Aberdonian's smiling reply was, "That's nothing to what it'll be when Ah bring back the empty bottle for tuppence."

Teacher: "What people are scattered all over the earth?"

Class (in chorus): "Pedestrians."

Culture is to know the best that has been said and thought in the world.

Minard's Liniment—a reliable first aid.

Little Helps For This Week

"God is not the author of confusion, but of peace."—1 Cor. xiv. 33.

Light strains of music, soft and low. That voice upon a troubled sleep; I hear the promises, old and new, "God will His faithful children keep

"A Perfect peace."

It stills the questionings and doubts, The nameless fears that throng the soul;

It speaks of love unchanging, sure; And everywhere my path is roll In perfect peace."

True peace is found only in the possession of God; and the possession of God here on earth consists only in submission to faith and obedience to law. Healgn every forbidden joy; restrain every wish that is not referred to this will; banish all eager desires, all anxiety; desire only the will of God; seek Him above all else, and you will find peace; you shall enjoy it in spite of the world.—Fenelon.

CHOLERA INFANTUM

Cholera infantum is one of the fatal ailments of childhood. It is a trouble that comes suddenly, especially during the summer months when the little ones are apt to have the little one may soon be beyond help. Every Town Topics has an ideal medicine in warding off this trouble. They aggravate the bowels and sweeten the stomach and thus prevent the dreaded summer complaints. They are an absolute safe medicine, being guaranteed to contain neither opiates nor any possibly do harm—there is no narcotics or other harmful drugs. They are given to the Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Taking His Revenge

Conductor—"Where to, sir? Why don't you stay on and go to Glacier Park?"

Passenger—"Because I want to go to St. Paul."

Conductor—"Can I sell you a seat in the chair car?"

Passenger—"No, not today."

Conductor—"A nice dinner on the diner at—one fifty?"

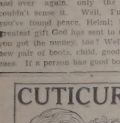
Passenger—"Are you kidding me."

Conductor—"Not at all; you're my barber, aren't you?"

Some men never have any respect for gray hairs until they acquire some of their own.

Let Minard's Liniment Relieve Pain.

Special crossword puzzles in which letters are pegged into squares on cardboard forms are being made in Paris for the use of blind people.

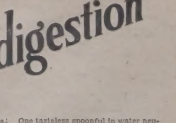


CUTICURA

Best For Both Mother And Child

Regular use of the Soap, assisted by the Ointment when required, not only cleanses and purifies the skin of children and adults, but tends to prevent clogging of the pores, the common cause of pimples and other unsightly conditions.

Sample Each Free by Mail. Address: Canadian Depot: "Cuticura Laboratories," Dept. T, Montreal. Sold throughout the British Empire. Soap 25c. Ointment 25 and 50c. Talcum 25c. Cuticura Shaving Stick 25c.



Indigestion

What most people call indigestion is usually excess acid in the stomach. The food has soured. The instant remedy is an alkali which neutralizes acids. But don't use crude helps. Use what your doctor would advise.

Your best help is Phillips' Milk of Magnesia. For the 50 years since its invention it has remained standard with physicians. You will find nothing else so quick in its effect, so harmless, so efficient.

One tasteless spoonful in water neutralizes many times its volume in acid. The results are immediate, with no bad after-effects. Once you learn this fact, you will never deal with excess acid in the crude ways. So learn—now—why this method is surest.

Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for 50 years in correcting excess acids. Each bottle contains full directions—any druggist.

COMBINES!

Before purchasing a combine see the Minneapolis and Holt, with independent pick-up and end delivery Swather, the only system that has proven a real success.

The Minneapolis combine is built for the North American continent to contend with heavy crops of straw, which require much more room for separation.

We also have a number of good buys in Second-hand Tractors and Separators.

THURSDAY, AUGUST 9, 1928

VACATION TIME

Something more than a change of location is necessary if vacationists who are able to take only two weeks from their work each year are to get the best results from the time. There should be as near as possible a complete reversal of the activities of the individual during his employment at home.

A surgeon of the Public Health Service says that indoor workers should make nearly as possible a complete change to outdoors, and that workers in the open will find their greatest recreation in reversing the conditions with which they were familiar in their employment.

The fact is that very few persons are overworked physically, but what they need is a change of environment that will give them the mental relaxation that is necessary if the keenness of their tasks is to be restored in the brief time usually available for vacations. There should be a minimum of suggestion of the job which has been temporarily abandoned.

Vacation should be a definite change from vocation, and unless this can be secured to the maximum degree much of the value of the period of relaxation will be sacrificed. The person who can manage to adapt himself promptly to conditions that will produce the desired results may count himself fortunate.

It should not be necessary to suggest to any one the wisdom of carefulness in the matter of eating and drinking when on vacation. That is taken for granted. More physical rejuvenation will not as a rule be possible at its best unless the mental attitude of the vacationist towards life in general has been quickened by contact with places and individuals.

Local and District

J. Q. Lane is spending his holidays in Calgary.

* * *

Horace Preece motored to Calgary last week returning on Thursday.

* * *

Mrs. R. Selkrik left on Friday for a two weeks visit to Stettler.

* * *

On Saturday last, before Peter Thompson, J.P., Dr. P. S. Brown, of Drumheller, was fined $50.00 and costs for infraction of the Noxious Weeds' Act. The case was brought on the information of J. R. Boon, weed inspector, and was a second offence.

BUSINESS SUMMARY

(Continued from Page One)

the item of wheat and of $600.00 in newsprint, but in the case of the latter quantity export was, relatively, greater than value export, indicating a slight cut in prices. In the three elapsed months of the current fiscal year exports of $236,117,000 compare with imports of $202,766,000, the position having thus swung to an adverse balance. A year ago in the three months' period exports exceeded imports by $25,071,000.

Reflecting and contributing to general prosperity is unabated activity in the building trade, and of the construction of houses and offices there is yet no end. All principal cities have shared in these undertakings. In the first six months of the year contracts awarded in 23 Canadian cities represented an aggregate dollars of $161,000,000, being $20,765,000 in excess of the corresponding year, and still more in excess of any previous like period. In June the gain was again large, the increase in value of permits in Montreal being $3,087,650 over 1927. The price of building materials has been somewhat higher this year, but not much lower than in any other year since 1920. This activity has greatly stimulated all allied trades, and accounts in a little for maintaining the high level of general business.

Activities have not been so marked at the ports of Maritime Provinces. The season owing to the fact that fewer tramp steamers have come in. Less coal has been landed from Great Britain, the decrease in the latter to July 20th having been 400,000 tons. Shipments noteworthy as unprecedented that on July 14th there was a supply of 1,000,000 Canada amounted to 74,257,000 bushels, as against 56,000,000 bushels for the corresponding period last year. Nearly 50,000,000 bushels will elapse before the new crop comes forward in any appreciable quantity. Passenger traffic via the St. Lawrence steadily increases, as does also the number of regular liners in this service.

New York funds have been in fair demand and with offerings light advanced to 7.07, previous, which is substantially above the export gold point. A sharp decline in Sterling was modified in the Canadian market by the advances in New York Funds. Sterling cables declined from 4.89 3/8 to 4.87 3/8 but recovered to 4.88¾. French Francs fell from 3.94 to 3.93¾ and all other European currencies made losses during the month, ranging from ½c to 3/8c. Contingent uncertainty as to the immediate outlook for money rates has tended to unsettle the bond market, and prices in all departments have shown a weaker tendency.

CLOSING OUT
SHOE SALE

R. PEARCE, MAIN STREET DELIA

Health Service of the Canadian Medical Association

CARE OF THE BABY IN SUMMER

More babies are sick in summer than at other seasons. This may be prevented by proper care, which includes:—

Breast-Feeding — Every baby should be breast-fed by his mother. Breast milk is the best milk for babies. It contains all those things which the baby's body requires. It is fresh; it is free from germs. Mothers should never wean their babies excepting when advised to do so by their physicians.

Safe Milk — If the baby is not breast-fed, or after he has been weaned, he must have safe milk. Pasteurized milk should be procured or if it cannot be bought, the milk that is supplied should be boiled for three minutes, or it can be pasteurized at home. The milk should be kept on ice, covered, and so protected from dirt, flies and insects.

Water — The baby should be given plenty of water. He cannot ask for it.

Bathing — The baby should have a bath once a day. In hot weather, an extra sponge off is good.

Fresh Air — The baby should practically live out-of-doors, on the porch, or in the yard. If he sleeps indoors the windows should be wide open.

Sunlight — The baby should have a sun-bath every day, beginning with short exposures until the whole body is exposed to the benefits of the sun's rays.

Clothing — The baby's clothes should be according to the weather. Many children are over-clothed. On very warm days, all the clothes except the diaper can be removed.

Flies And Insects — Because they spread disease, all flies and insects should be kept away from the child. Netting should be used.

In case of any digestive upset or irregularity of the bowel movements, a physician should be consulted at once. At the beginning, such conditions respond promptly to proper treatment; if allowed to continue, the condition may become serious and difficult to cure.

Questions concerning Health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered by letter. Questions as to diagnosis and treatment will not be answered.

Card of Thanks

Miss Annie Heath wishes to thank the members of the Delia W. meet'y, Institute and Ladies' Aid Society, also Mr. and Mrs. W. J. Sarsons, Mr. and Mrs. F. C. Hildestead and Mr. and Mrs. John Cartge for loveley flowers sent during her recent illness.

WALLIS Tractors

With each U.S gallon used the Wallis tested developed 87.68 h.p., which is the highest fuel economy ever officially recorded for any wheel tractor approaching it in piston displacement and weight
